Specifications

15000652_Rev. G 12/2021

## Available Models :

3. PGD3V: 96X96 with 20 mm Display

5. PGD3V : $48 \times 96$ size

2. PGD3A : 96X96 with 14 mm Display

4. PGD3A : 96X96 with 20 mm Display

6. PGD3A : $48 \times 96$ size

## 1. Introduction

The PGD3 Series is a panel mounted $96 \times 96 \mathrm{~mm}$ and $48 \times 96 \mathrm{~mm}$ Digital Panel Meters for the measurement of AC Voltage and current in 3 phase and single phase systems.

The instrument integrates accurate measurement technology. The measurements are True RMS upto 15th Harmonic. The parameters are displayed with Ultra high Brightness LED display with 20 mm and 14 mm Digit height options.

Programmable DPM can be configured and Programmed at site for the following : PT Primary, PT Secondary, CT Primary, CT secondary and System type 3 phase 3 W or 4 W or single phase System.
The front panel has two push buttons for user interface to scroll through the available parameters the two keys has function as follow :

R : Scrolls through parameter in upward sequence Display sequence PGD3V : VL1, VL2, VL3, VL1L2, VL2L3,VL3L1, Vsys, max value, min value and then back to VR.
Display sequence PGD3A : IL1, IL2, IL3, Isys, max value, Min value and back to IR.
2. $\boldsymbol{\sim}$ : Scrolls the parameters in Reverse of above sequence.

These DPMs come with 14 mm and 20 mm Display options, which enables to take readings From long distance. The unit of display is illuminated form back side with bright LEDs, which overcomes the problem with conventional LED annunciators that could not be clearly understood the parameter being displayed from a distance.

TABLE 1: Parameters Displayed with PGD3V models

| Measured Parameters | Unit of measurement |
| :--- | :---: |
| Voltage VL1 | Volts |
| Voltage VL2 | Volts |
| Voltage VL3 | Volts |
| Voltage VL1-L2 | Volts |
| Voltage VL2-L3 | Volts |
| Voltage VL3-L1 | Volts |
| System Voltage | Volts |
| System Voltage max. Value (Hi) | Volts |
| System Voltage min. Value (Lo) | Volts |

TABLE 2: Parameters Displayed with PGD3A models

| Measured Parameters | Unit of measurement |
| :--- | :---: |
| Current IL1 | Amp |
| Current IL2 | Amp |
| Current IL3 | Amp |
| System Current | Amp |
| System Current max. Value (Hi) | Amp |
| System Current min. Value (Lo) | Amp |

## 2. Measurement Reading Screens

In normal operation the user is presented with the measurement reading screens These screens may be scrolled through one at a time in incremental order by pressing the key and in decrementing order by pressing $\boldsymbol{\sim}$ key.
A. Display Screens of PGD3V Models :

Screen 1 : Voltage L1 Phase
(For 3Ph4 Wire only)

Screen 2 : Voltage L2 Phase (For 3Ph4 wire only)

Screen 5 : Line to Line Voltage (Voltage between L2 and L3 phase)

Screen 7 : System Voltage

Screen 8 : System Voltage max Value Value displayed after "Hi" flashing on Display

Screen 6 : Line to Line Voltage (Voltage between L3 and L1 phase)
(Voltage between L1 and L2 phase)

Screen 9 : System Voltage min Value
Value displayed after "Lo" flashing on Display

## B. Screens of PGD3A Models :

Screen 1 : Current L1 Phase

Screen 2 : Current L2 Phase

Screen 3 : Current L3 Phase

Screen 5 : System Current Max. Value Value displayed after "Hi" flashing on Display

Screen 4 : System Current

Screen 6 : System Current min. Value Value displayed after "Lo" flashing on Display

## 3. Programming

The following sections comprise step by step procedures for configuring the PGD3A and PGD3V for individual user requirements.
To access the set-up screens press and hold the " $\uparrow$ " and " $\zeta$ " Keys Simultaneously. This will take the User into the Password Entry Screen Followed by "CodE" on Display (Section 3.1).

### 3.1. Password Protection

Password protection can be enabled to prevent unauthorised access to set-up screens. By default password protection is not enabled.
Password protection is enabled by selecting a four digit number other than 0000.
Setting a password of 0000 disables the password protection.

## Password Entry :

Enter Password, prompt for first digit. (* Denotes that decimal point will be flashing).

Press the "乌" key to scroll the value of the first digit from 0 to 9 , the value will wrap from 9 round to 0 .

Press the " $\zeta$ " key to advance to next digit.
In the case, where the Password is "0000" pressing the " $\delta$ " key when prompted for the first digit will advance to the "Password Confirmed" screen.

Enter Password, first digit entered, prompt for Second digit.
(* Denotes that decimal point will be flashing).
Use the " V " key to scroll the value of the second digit from 0 through to 9 , the value will wrap from 9 round to 0 .
Press the " $\zeta$ " key to advance to next digit.

## 3．2 Set Up Screens

## 3．2．1．System Type

This screen is Displayed after entering password followed by＂Sys＂on Display．

This screen is used to set the system type． System type＂ 3 ＂for 3 phase 3 wire \＆＂ 4 ＂for 3 phase 4 wire system \＆＂1＂for Single phase system． Pressing＂$\zeta$＂key accepts present value and advances to＂Potential transformer Primary value edit＂ menu（section 3．2．2）for PGD3V model or to＂Current Transformer Primary value edit＂menu（section 3．2．4） For PGD3A models．
Pressing＂仓＂Key will enter the System type edit Mode and scroll the values through values available．

Pressing＂ $\int$＂Key advances to the system type Confirmation menu．

## System Type Confirmation

This screen will appear following the edit of system type in above screen．

Pressing the＂$\zeta$＂key set the displayed value
and will advance to＂Potential Transformer Primary Value Edit＂menu．（See section 3．2．2）

Pressing the＂乌＂key re－enter System type edit Menu．

## 3．2．2．Potential Transformer Primary Value（for PGD3V models）

The nominal full scale voltage which will be displayed as the Line to Line voltage for all system types．This screen is displayed followed by＂PtPr＂on display and enables user to set any PT Primary value from 100VL－L to $999 \mathrm{kVL}-\mathrm{L}$ ．

Note ：PT Values must be set as Line to Line Voltage for Primary as well as Secondary for all system types．

Pressing the＂$\zeta$＂key accepts the present value and advances to the＂Potential Transformer secondary value Edit＂menu．（See Section 3．2．3）

Pressing the＂$\uparrow$＂key will enter the＂Potential transformer Primary Value Multiplier Selection．
Initially the＂multiplier must be selected．Pressing the ＂今＂Key will move the decimal point position to the right Side and show \＃\＃\＃．after which it will again return to \＃．\＃\＃with Annunciation of＂K＂，which indicates the value in kV ．

Pressing the＂$\zeta$＂key accepts the present multiplier（Decimal Point position）and advances to the＂Potential Transformer value Edit＂menu．

## Potential Transformer value Edit

Pressing the＂$仓$＂key will scroll the value of the most significant digit（100s）from 0 through to 9 ．

Pressing the＂$\zeta$＂key accepts the present value at the cursor position and advances the cursor to the next Less significant digit．

Note ：the flashing decimal point indicates the cursor position，a steady decimal point will be present to identify the scaling of the number until the cursor position coincides with the steady decimal point position．At this stage the decimal point will be flashing．

When the least significant digit has been set，pressing the＂$\zeta$＂key will advance to the ＂Potential transformer Primary Value Confirmation＂screen．
Screen showing display of 11.0 kV （i．e． 11000 Volts）indicating steady decimal point and cursor flashing at the＂tens＂position as shown in above screen．

Potential Transformer Primary Value Confirmation
This screen will only appear following an edit of the Potential Transformer Primary Value followed by＂ULL＂ on Display．
If the set value is to be corrected，pressing the＂ $\mathrm{\checkmark}$＂
key will return to the＂Potential Transformer Primary Value Edit＂stage
Pressing the＂$\zeta$＂key sets the value and then advance to the Potential Transformer Secondary Value edit screen（See section 3．2．3．）

## 3．2．3 Potential Transformer Secondary Value（for PGD3V models）

This screen is displayed after PT primary value set Followed by＂Pt－S＂it automatically goes to value edit． Pressing＂ $\int$＂key accepts the present value and then Advances to RESET menu（section 3．2．6）．
Pressing the＂乌＂key will enter the PT secondary value edit mode．＊denotes that the decimal point will Be flashing．
Pressing＂仓＂will scroll the digit value 0 through 9 and back to 0 ，except Most Significant Digit，in which the Value will be scrolled from 1 through 5 and back to 1 ．

Secondary value can be set from $100 \mathrm{VL}-\mathrm{L}$ to $\mathbf{5 0 0 V L}$－L．
Pressing the＂$\Omega$＂key will move curser to next Digit．When Value of Least significant digit is set pressing＂$\uparrow$＂Will enter Secondary value confirmation screen．

## PT secondary value Confirmation

This screen will appear following the edit of PT secondary in above screen．
Pressing the＂$\zeta$＂key set the value and will advance to Reset of min／max values selection menu．（See section 3．2．6）

Pressing the＂ S ＂key re－enter Potential Transformer Value edit menu．

## 3．2．4 Current Transformer Primary Value（for PGD3A models）

The nominal full scale Current which will be displayed Phase current for both system types． This screen enables user to display Phase current inclusive of any CT Ratio 1A upto 999kA．

Note ：the flashing decimal point indicates the cursor position，a steady decimal point will be present to identify the scaling of the number until the cursor position coincides with the steady decimal point position．At this stage the decimal point will flash．

When the least significant digit has been set，pressing the＂$\zeta$＂key will advance to the ＂Current transformer Primary Value Confirmation＂screen．

Current Transformer Primary Value Confirmation
This screen will only appear following an edit of the Current Transformer Primary Value．
If the set value is to be corrected，pressing the＂仓＂ key will return to the＂Current Transformer Primary Value Edit＂stage．

Pressing the＂$\zeta$＂key sets the value and then advance to the Current Transformer Secondary Value edit screen（See section 3．2．5）

## 3．2．5 Current Transformer Secondary Value（for PGD3A models）

This screen is displayed after CT primary value set Followed by＂Ct－S＂on display．
Screen Pressing＂$\checkmark$＂，key accepts the present value and then advances to reset menu（section 3．2．6）．
Pressing the＂乌＂key will scroll between 1 and 5 ．
When desired Current transformer secondary value selected on display，pressing＂Љ＂will enter to CT secondary value confirmation screen．

## CT secondary value Confirmation

This screen will appear following the edit of CT secondary in above screen．

Pressing the＂$\zeta$＂key set the value and will advance to Reset menu（See section 3．2．6）

Pressing the＂乌＂key re－enter Current Transformer Value edit menu．

## 3．2．6 RESET of $\min / \max$ Values

This screen is displayed after CT／PT secondary set followed by＂RESET＂on Display．

Pressing＂$\uparrow$＂key enters into Reset menu and scrolls between the parameters as shown in the screens with pressing the key again．
Pressing＂$\delta$＂key enters Screen Auto or fixed selection menu（section 3．2．7）
By selecting the parameters it resets the respective parameters as follow ：
None ：No parameter reset
ALL：Both min and max values reset
Hi ：max value reset
Lo ：min value reset

Pressing＂$\uparrow$＂key scrolls between the screens．
Pressing＂$\zeta$＂selects the displayed parameter and enters to Reset parameter confirmation Screen．

## Reset parameter confirmation

Pressing＂仓＂key re－enters reset menu．
Pressing＂$\zeta$＂resets the selected parameter and enters to Screen Auto scrolling or fixed． Selection menu（section 3．2．7）．

## 3．2．7 Selection of Auto Scrolling or fixed Screen

This Screen will display after RESET of min／max value Confirmation followed by＂AUtO＂Display．

Pressing the＂乌＂key will scroll between＂Yes＂and ＂No＂．
Select＂Yes＂for Auto scrolling of parameter display and Select＂No＂for fixed display screen．
Pressing the＂$\zeta$＂key will enter into Screen selection Confirmation screen．

## Auto／Fixed Screen Confirmation

Pressing the＂$\zeta$＂key set the selected option and Exit set up with entering into measurement mode．

Pressing the＂$\uparrow$＂key re－enter Screen selection menu．

## 4．Installation

Mounting of PGD3V／A is featured with easy＂Clip－in＂mounting．Push the meter in panel slot（size $92 \times 92 \mathrm{~mm}$ ），it will click fit into panel with the four integral retention clips on two sides of meter．
If required Additional support is provided with swivel screws（optional）as shown in figure．

As the front of the enclosure conforms to Ip50 it is protected from water spray from all directions，additional protection to the panel may be obtained by the use of an optional panel gasket．The terminals at the rear of the product Should be protected from liquids．

The PGD3V／A should be mounted in a reasonably stable ambient
temperature and where the operating temperature is within the range 0 to $50^{\circ} \mathrm{C}$ ．Vibration should be kept to a minimum and the product should not be mounted where it will be subjected to excessive direct sunlight．

## Caution

1. In the interest of safety and functionality this product must be installed by a qualified engineer, abiding by any local regulations.
2. Voltages dangerous to human life are present at some of the terminal connections of this unit. Ensure that all supplies are de-energised before attempting any connection or disconnection.
3. These products do not have internal fuses therefore external fuses must be used to ensure safety under fault conditions.

### 4.1 EMC Installation Requirements

This product has been designed to meet the certification of the EU directives when installed to a good code of practice for EMC in industrial environments, e.g.

1. Screened output and low signal input leads or have provision for fitting

RF suppression components, such as ferrite absorbers, line filters etc., in the event that RF fields cause problems.

Note: It is good practice to install sensitive electronic instruments that are performing critical functions, in EMC enclosures that protect against electrical interference which could cause a disturbance in function
2. Avoid routing leads alongside cables and products that are, or could be, a source of interference.
3. To protect the product against permanent damage, surge transients must be limited to 2 kV pk. It is good EMC practice to suppress differential surges to 2 kV at the source. The unit has been designed to automatically recover in the event of a high level of transients. In extreme circumstances it may be necessary to temporarily disconnect the auxiliary supply for a period of greater than 5 seconds to restore correct operation.
4. ESD precautions must be taken at all times when handling this product.

### 4.2 Case Dimension and Panel Cut Out

### 4.2.1 for 96X96 models

MAX PANEL THICKNESS 0.18 ",5mm

### 4.2.1 for 48X96 models

### 4.3 Wiring

Input connections are made directly to screw-type terminals with indirect wire pressure. Numbering is clearly marked on the connector. Choice of cable should meet local regulations. Terminal for inputs will accept up to $4 \mathrm{~mm}^{2}$ (12 AWG) solid or $2.5 \mathrm{~mm}^{2}$ (12AWG) standard cable.
Note: 1) It is recommended to use wire with lug for connection with meter.
2) For disconnecting the device a switch or circuit-breaker shall be included at the site and it shall be within easy reach of the operator.

### 4.4 Auxiliary Supply

PGD3V/A should ideally be powered from a dedicated supply, however it may be powered from the signal source, provided the source remains within the limits of the chosen auxiliary voltage.

### 4.5 Fusing

It is recommended that all voltage lines are fitted with 1 amp HRC fuse.

### 4.6 Earth/Ground Connections

For safety reasons, panels and accesoriess should be grounded in accordance with local regulations.

## 5. Connection Diagrams

### 5.1 Connections For PGD3V 96X96 models

5.2 Connections For PGD3A 96X96 models

3-PHASE 3-WIRE UNBALANCED LOAD

3-PHASE 4-WIRE UNBALANCED LOAD DIGITAL PANEL METER

### 5.3 Connections For PGD3V 48X96 model

5.4 Connections For PGD3A 48X96 model

*Note: For Measurement of parameters in PGD3V LD DPM Voltage must be present between terminal 8 \& 1 (i.e phase L1) for single phase or 3 phase 4 wire network and between terminal 6 \& 8 (i.e phase L12) or $3 \& 8$ (i.e phase L31) for 3 phase 3 wire network.
And for PGD3A LD DPM current must be present between terminal 9 \& 10 (i.e phase I1)for 3 phase 4 wire or 3 phase 3 wire or single phase network.

## 6. Specifications :

| System |  |
| :---: | :---: |
| 3 Phase 3 Wire / 4 Wire or Single Phase programmable at site |  |
| Inputs (PGD3V) : |  |
| Nominal Input Voltage | $290 \mathrm{~V}_{\text {LN },} 500 \mathrm{~V}_{\text {L-L }}$ |
| System Primary Values | 100VL-L to $999 \mathrm{kVL-L}$, programmable at site |
| System Secondary Values | 100VL-L to $500 \mathrm{VL}-\mathrm{L}$, programmable at site |
| Max continuous input voltage | 120\% of Rated Value |
| Overload Indication | (If input is greater than $125 \%$ of secondary value.) |
| Max short duration input voltage | $2 \times$ Rated Value (1s application repeated 10 times at 10 s intervals) |
| Nominal input voltage burden | 0.3VA approx. per phase |
| Inputs (PGD3A) : |  |
| Nominal Input Current | 5A AC |
| System CT primary values | Standard Values 1 to 999 kA |
| System Secondary Values | 1A/5A, programmable at site |
| Max continuous input current | 120\% of Rated Value |
| Overload Indication | (If input is greater than $125 \%$ of secondary value.) |
| Nominal input Burden | 0.2 VA approx. per phase |
| Max short duration current input | $20 \times$ Rated Value (1s application repeated 5 times at 5 min. intervals) |

## Auxiliary Supply :

External Auxiliary Supply
40 V to 300 V AC/DC (+/-5\%)
Frequency Range $\quad 45$ to 65 Hz
VA Burden 3 VA approx.

## Operating Measuring Ranges

| PGD3V : Voltage | $10 \ldots 120 \%$ of Rated Value |
| :--- | :--- |
| PGD3A : Current | $10 \ldots 120 \%$ of Rated Value |
| Frequency | $45 \ldots 65 \mathrm{~Hz}$ |

Accuracy
PGD3V : Voltage $\quad 0.5 \%$ of range +1 Digit (10... $100 \%$ of Nominal Value)
PGD3A : Current $\quad 0.5 \%$ of range +1 Digit ( $10 \ldots 100 \%$ of Nominal Value)

Reference conditions for Accuracy :

| Reference temperature | $23^{\circ} \mathrm{C} \pm 2^{\circ} \mathrm{C}$ |
| :--- | :--- |
| Input frequency | 50 or $60 \mathrm{~Hz} \pm 2 \%$ |
| Input waveform | Sinusoidal (distortion factor 0.005 ) |
| Auxiliary supply voltage | Rated Value $\pm 1 \%$ |
| Auxiliary supply frequency | Rated Value $\pm 1 \%$ |

Nominal range of use of influence quantities for measurands

| PGD3A : Current | 10 ... 120 \% of Rated Value |
| :---: | :---: |
| PGD3V : Voltage | 10 ... 120 \% of Rated Value |
| Input frequency | Rated Value $\pm 10$ \% |
| Temperature | 0 to $50^{\circ} \mathrm{C}$ |
| Auxiliary supply voltage | Rated Value $\pm 5$ \% |
| Auxiliary supply frequency | Rated Value $\pm 10 \%$ |
| Temperature Coefficient |  |
| Voltage (PGD3V) | $0.025 \% /{ }^{\circ} \mathrm{C}(10 . .120 \%$ of Rated Value) |
| Current (PGD3A) | 0.05\% / ${ }^{\circ} \mathrm{C}$ (10... $120 \%$ of Rated Value) |
| (For Rated value range of use $0 \ldots 50^{\circ} \mathrm{C}$ ) |  |
| Error change due to variation of an influence quantity | 2 * Error allowed for the reference condition applied in the test. |
