RISH Ducer E13

Transducer - AC Current / AC Voltage

RoHS CE

Measure Control Record Analyze

Application

The Transducer *RISH* DuceE13 is used to convert a 3 sine wave AC Voltage or AC Current (depending on types) into a (load independent DC current or load independent DC Voltage) 3 output signal. That can serve several receiving instruments such as indicators, recorders, alarm units etc.

Features / Benefits

- Up to 3 measuring inputs: AC currents or AC voltages sine wave-form, arithmetical mean value measurement, calibration to rms with sine wave form

Measuring Variables	Measuring Ranges
AC Currents AC Voltages	0 ... 0.01 to 0 ... 10 A 0 ... 10 to 0 ... 750 V

- Three measuring outputs: DC current signal (load-independent) or DC voltage signal
- Low power consumption / Smaller CT's & VT's can be used
- Provision for either snapping the transducer onto top - hat rails or securing it with screws to a wall or panel
- Manufactured in SMD technology/compact & reliable
- Screw terminals suitable for multistrand or thick solid wires.
- Electric isolation between input / output and power supply (3.7 kV) / personnel protection assured
- Electric isolation between channels is 500V

Layout & Mode of Operation

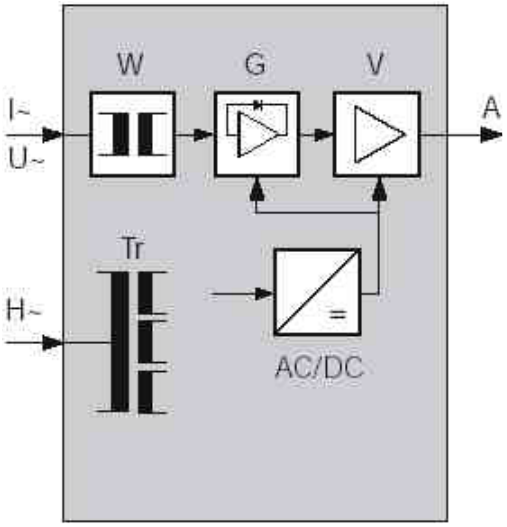

Fig : Block diagram for a function unit

The measured variable I/U AC is isolated from the electronics by the transformer W, and is rectified and smoothed in the rectifier unit G following. The output amplifier V amplifies this quantity and converts it into the load-independent DC output signal A.

With AC power supply the supply is processed by a mains transformer with three isolated secondary windings.

Technical Data

General

Measuring Quantity	AC current or AC voltage sinusoidal Arithmetical mean measured, calibration to rms with sine wave form
Measuring principle	Active rectifier

Measuring input E

Nominal frequency f_N (1)	50 or 60 Hz
Nominal input current I_N (full range end value) (2)	1 / 1.2 / 5 or 6 A
Nominal input voltage U_N (full range end value) (3)	100/√3 / 110 /√3 / 120 /√3 / 100 / 110 116.66 / 120 / 125 / 133.33 / 150 / 250 / 400 or 500 V
Consumption	< 0.2 VA per Current Circuit < 1 mA per Voltage Circuit
Sensitivity	< 0.05 % of full range value

Overload capacity :

Measured quantity $I_N U_N$	Number of applications	Duration of one application	Interval between two successive applications
2 x I_N	continuously	———	———
10 x I_N	5	15 s	5 min.
20 x I_N	5	1 s	5 min.
40 x I_N	1	1 s	———
1.5 x U_N	continuously	———	———
2 x U_N	10	10 s	10 s
4 x U_N	1	2 s	———

Measuring output A

Output Variable	load-independent DC voltage U_A OR Load-independent DC current I_A
