## 1. Introduction

The 3430 is a panel mounted $96 \times 96 \mathrm{~mm}$ DIN Quadratic Digital metering system for the measurement important electrical parameters like AC voltage, AC Current, Frequency, Power, Energy(Active / Reactive / Apparent) . The instrument integrates accurate measurement technology (All Voltages \& Current measurements are True RMS upto 15th Harmonic) with 3 line 4 digits Ultra high brightness LED display.

3430 can be configured and programmed at site for the following : PT Primary, PT Secondary, CT Primary, CT Secondary ( 5 A or 1 A ) and 3 phase 3 W or 3 Phase 4W system.
The screen shown on left is of 3 Phase Meter.

The screen shown further is of 1 Phase Meter. The front panel has two push buttons through which the user may scroll through the available measurement readings, reset the energy (Import/Export) Min/Max (System Voltage and System Current) and configure the product.

## TABLE 1:

| Measured Parameters | Units of <br> Measurement |
| :--- | :---: |
| System Voltage | Volts |
| System Current | Amps |
| Voltage VL1-N(4wire only) | Volts |
| Voltage VL2-N(4wire only) | Volts |
| Voltage VL3-N(4wire only) | Volts |
| Voltage VL1-L2 ( for 3 / 4 wire) | Volts |
| Voltage VL2-L3 ( for 3 / 4 wire) | Volts |
| Voltage VL3-L1 ( for 3 / 4 wire) | Volts |
| Current L1 ( for 3/4 wire) | Amps |
| Current L2 ( for 3 / 4 wire) | Amps |
| Current L3 ( for 3 / 4 wire) | Amps |
| Neutral Current ( 4 wire only ) | Amps |
| Active Power (System / Phase (4 wire only) ) | Kwatts |
| Reactive Power (System / Phase (4 wire only)) | KVAr |
| Apparent Power (System / Phase (4 wire only)) | KVA |
| Power Factor (System / Phase (4 wire only)) | - |
| Phase Angle ( Phase(4 wire only)) | Degree |
| Active Import Energy (8 Digit resolution) | kWh |
| Active Export Energy (8 Digit resolution) | kWh |
| Reactive Import Energy (8 Digit resolution) | kVArh |
| Reactive Export Energy (8 Digit resolution) | kVArh |
| Apparent Energy (8 Digit resolution) | kVAh |

| Measured Parameters | Units of <br> Measurement |
| :--- | :---: |
| V1 THD* ( for 3/4 wire) | $\%$ |
| V2 THD* ( for 3/4 wire) | $\%$ |
| V3 THD* ( for 3/4 wire) | $\%$ |
| I1 THD ( for 3/4 wire) | $\%$ |
| I2 THD ( for 3/4 wire) | $\%$ |
| I3 THD (for 3/4 wire) | $\%$ |
| System Voltage THD | $\%$ |
| System Current THD | $\%$ |

[^0]
## 2. Measurement Reading Screens

In normal operation the user is presented with one of the measurement reading screens out of several screens. These screens may be scrolled through one at a time in incremental order by pressing the " $\cup \mathbf{U p}$ key" and in decremental order by pressing " $\Omega$ Down key".

## Parameter Screens 3 Phase

## 3．Programming

The following sections comprise step by step procedures for configuring the 3430 for individual user requirements．
To access the set－up screens press and hold the＂Down＂and＂部 Up＂ Key simultaneously for 5 seconds．This will take the User into the Password Protection Entry Stage（Section 3．1）．

## 3．1．Password Protection

Password protection can be enabled to prevent unauthorized access to set－up screens，by default password protection is not enabled．

Password protection is enabled by selecting a four digit number other than 0000 ，setting a password of 0000 disables the password protection．

Enter Password，prompt for first digit．
（＊Denotes that decimal point will be flashing）．
Press the＂§Down＂key to scroll the value of the first digit from 0 through to 9 ，the value will wrap from 9 round to 0 ．

Press the＂个Up＂key to advance to next digit．

In the special case where the Password is＂ 0000 ＂pressing the＂个Up＂key when prompted for the first digit will advance to the＂Password Confirmed＂screen．

Enter Password, first digit entered, prompt for second digit.
(* Denotes that decimal point will be flashing).
Use the " Down" key to scroll the value of the second digit from 0 through to 9 , the value will wrap from 9 round to 0 .

Press the " $\boldsymbol{\sim} U p$ " key to advance to next digit.

Enter Password, second digit entered, prompt for third digit.
(* Denotes that decimal point will be flashing).
Use the "』 Down" key to scroll the value of the third digit from 0 through to 9 , the value will wrap from 9 round to 0 .

Press the " $\boldsymbol{\Psi} U p "$ key to advance to next digit.

Enter Password, third digit entered, prompt for fourth digit.
(* Denotes that decimal point will be flashing).
Use the " Down" key to scroll the value of the fourth digit from 0 through to 9 , the value will wrap from 9 round to 0 .

Press the " $\boldsymbol{r}$ Up" key to advance to verification of the password.

Enter Password，fourth digit entered，awaiting verification of the password．

Password confirmed．
Pressing＂反Down＂key will advance to the＂New／ change Password＂entry stage．
Pressing the＂个Up＂key will advance to the Menu selection

## Password Incorrect．

The unit has not accepted the Password entered．

Pressing the＂Down＂key will return to the Enter Password stage．

Pressing the＂个 Up＂key exits the Password menu and returns operation to the measurement reading mode．

## New／Change Password

（＊Decimal point indicates that this will be flashing）．
Pressing the＂ת Down＂key will scroll the value of the first digit from 0 through to 9 ，the value will wrap from 9 round to 0 ．

Pressing the＂ $\boldsymbol{\sim} U p$＂key to advance the operation to the next digit and sets the first digit，in this case to＂ 2 ＂

New／Change Password，first digit entered，prompting for second digit．（＊Decimal point indicates that this will be flashing）．

Pressing the＂』 Down＂key will scroll the value of the second digit from 0 through to 9 ，the value will wrap from 9 round to 0 ．
Pressing the＂个 Up＂key to advance the operation to the next digit and sets the second digit，in this case to＂ 1 ＂

（B）
（ひ）

New／Change Password，second digit entered， prompting for third digit．（＊decimal point indicates that this will be flashing）．

Pressing the＂Down＂key will scroll the value of the third digit from 0 through to 9 ，the value will wrap from 9 round to 0 ．

Pressing the＂ $\boldsymbol{\tau}$ Up＂key to advance the operation to the next digit and sets the third digit，in this case to＂ 5 ＂

New / Change Password, third digit entered, prompting

New Password confirmed.
Pressing the " $\sqrt{ }$ Down" key will return to the "New/Change Password".
Pressing the " $\boldsymbol{\uparrow}$ Up" key will advances to the Menu selection screen.(see section 3.2). for fourth digit. (* denotes that decimal point will be flashing).
Pressing the " Down" key will scroll the value of the fourth digit from 0 through to 9 , the value will wrap from 9 round to 0 .
Pressing the " $\boldsymbol{\uparrow}$ Up" key to advance the operation to the "New Password Confirmed" and sets the fourth digit, in this case to " 3 ".

### 3.2 Set up Screens

### 3.2.1 System Type

This screen is used to set the system type . System type " 3 " for 3 phase 3 wire \& " 4 " for 3 phase 4 wire system.
Pressing the " $\boldsymbol{\sim}$ Up" key accepts the present value and advances to the "Potential transformer primary value Edit" menu (see section 3.2.2) Pressing the " Down" key will enter the system type edit mode and scroll the values through values available .
Pressing the " $\boldsymbol{\uparrow}$ Up" key advances to the system type confirmation menu.

## System Type Confirmation

This screen will only appear following the edit of system type. If system type is to be Downed again,

Pressing the " $\boldsymbol{\uparrow}$ Up" key sets the displayed value and will advance to "Potential Transformer Primary Value Edit" menu. (See section 3.2.2)

Pressing the " $\sqrt{ }$ Down" key will return to the system type edit stage by blanking the bottom line of the display

### 3.2.2 Potential Transformer Primary Value

The nominal full scale voltage which will be displayed as the Line to Line voltages for all system types. The values displayed represent the voltage in kilovolts (note the x1000 enunciator).

Pressing the "个Up" key accepts the present value and advances to the "potential Transformer secondary Value edit" menu. (See Section 3.2.3)

Pressing the " Down" key will enter the "Potential Transformer Primary Value Edit" mode.

Initially the "multiplier must be selected, pressing the " Down" key will move the decimal point position to the right until it reaches \#\# \# \# after which it will return to \#. \# \# \#.
Pressing the " $\boldsymbol{\sim}$ Up" key accepts the present multiplier (decimal point position) and advances to the "potential Transformer primary Digit Edit" mode.

## Potential Transformer primary Digit Edit

Pressing the " Down" key will scroll the value of the most significant digit from 0 through to 9 unless the presently displayed Potential Transformer Primary Value together with the Current Transformer Primary Value, previously set, would result in a maximum power of greater than 666.6 MVA per phase in which case the digit range will be restricted.

Pressing the " $\boldsymbol{\uparrow} U p$ " key accepts the present value at the cursor position and advances the cursor to the next less significant digit.

The PT Primary value can be set from 100V L-L to $692.8 \mathrm{kV} \mathrm{L-L}$.
Note : the flashing decimal point indicates the cursor position, a steady decimal point will be present to identify the scaling of the number until the cursor position coincides with the steady decimal point position. At this stage the decimal point will flash.

When the least significant digit has been set pressing the "యUp" key will advance to the "Potential Transformer Primary Value Confirmation" stage.

Screen showing display of 0.120 kV i.e. 120 Volts indicating steady decimal point and cursor flashing at the "hundreds of volts" position.

> Potential Transformer Primary Value Confirmation This screen will only appear following an edit of the Potential Transformer Primary Value. If the scaling is not correct, pressing the " Down" key will return to the "Potential Transformer Primary Value Edit" stage.
> Pressing the "个Up" key sets the displayed value and will advance to the Potential Transformer secondary Value (See Section 3.2.3)
> Note : 0.120 kV i.e. 120 VL-L

### 3.2.3 Potential Transformer secondary Value

The value must be set to the nominal full scale secondary voltage which will be obtained from the Transformer when the potential transformer(PT)primary is supplied with the voltage defined in 3.2.1.2 potential transformer primary voltage. The ratio of full scale primary to full scale secondary is defined as the transformer ratio.

Pressing the " $\boldsymbol{\tau}$ Up" key accepts the present value and advances to the "Current Transformer Primary Value edit" menu. (See Section 3.2.4)
The Valid range of instrument is from 100 to $600 \mathrm{~V}_{\mathrm{L}-\mathrm{L}}$.
Pressing the " $\sqrt{ }$ Down" key will enter the "Potential Transformer Secondary Value Edit" mode. "Down" key will scroll the value of the most significant digit from available range of PT secondary value

Pressing the "个Up" key accepts the present value at the cursor position and advances the cursor to the next less significant digit.

Note : the flashing decimal point indicates the cursor position, a steady decimal point will be present to identify the scaling of the number until the cursor position coincides with the steady decimal point position. At this stage the decimal point will flash.

When the least significant digit has been set pressing the "个Up" key will advance to the "Potential Transformer secondary Value Confirmation" stage.

Potential Transformer Secondary Value Confirmation
This screen will only appear following an edit of the Potential Transformer Secondary Value.

If the scaling is not correct, pressing the " Down" key will return to the "Potential Transformer Secondary Value Edit"

Pressing the " $\mathbf{\sim} U p$ " key sets the displayed value and will advance to the current Transformer Primary Value (See Section 3.2.4)

### 3.2.4 Current Transformer Primary Value

The nominal Full Scale Current that will be displayed as the Line currents. This screen enables the user to display the Line currents inclusive of any transformer ratios, the values displayed represent the Current in Amps.

Pressing the " $\boldsymbol{\uparrow}$ Up" key accepts the present value and advances to the Current Transformer Secondary Value (See Section 3.2.5)

Pressing the " Down" key will enter the "Current Transformer Primary Value Edit" mode. This will scroll the value of the most significant digit from 0 through to 9 , unless the presently displayed Current Transformer Primary Value together with the Potential Transformer

Primary Value results in a maximum power of greater than 666.6 MVA in which case the digit range will be restricted, the value will wrap. Example: If primary value of PT is set as $692.8 \mathrm{kV} \mathrm{L-L} \mathrm{(max} \mathrm{value)} \mathrm{then} \mathrm{primary} \mathrm{value}$ of Current is restricted to 1157A.

Pressing the " $\boldsymbol{\uparrow} U p$ " key will advance to the next less significant digit. (* Denotes that decimal point will be flashing).

The "Maximum Power" restriction of 666.6 MVA refers to $120 \%$ of nominal current and $120 \%$ of nominal voltage, i.e, 462.96 MVA nominal power per phase.
When the least significant digit had been set, pressing the "个Up" key will advance to the "Current Transformer Primary Value Confirmation" stage.

The minimum value allowed is 1 , the value will be forced to 1 if the display contains zero when the " $\boldsymbol{\uparrow}$ Up" key is pressed.

Current Transformer Primary Value Confirmation.
This screen will only appear following an edit of the Current Transformer Primary Value.
If the scaling is not correct, Pressing the " Down" key will return to the " Current Transformer Primary Value"Edit stage with the most significant digit highlighted (associated decimal point flashing) and the bottom line of the display will be blanked. Pressing the " $\boldsymbol{\Gamma}$ Up" key sets the displayed value and will advance to the "Current Transformer Secondary Value Edit" menu. (See Section 3.2.5)

### 3.2.5 Current Transformer Secondary Value

This screen is used to set the secondary value for Current Transformer. Secondary value "5" for 5A or "1" for 1A can be selected. Pressing " $\boldsymbol{\uparrow}$ Up" key accepts the present value and advances to the Reset parameter screen (See Section 3.2.6)

Pressing the " Down" key will enter the CT Secondary value edit mode and scroll the value through the values available.
Pressing the "个 Up" key will advance to the CT
 Secondary value confirmation.

## CT Secondary value confirmation

This screen will only appears following an edit of CT secondary value .

If secondary value shown is not correct, pressing the Down key will return to CT secondary edit stage by blanking the bottom line of the display.
Pressing "个 Up" key sets the displayed value and will advance to reset parameter menu.
(See Section 3.2.6)

### 3.2.6 Reset Parameter :

The following screens allow the users to reset the All parameters,Energy , Lo(Min), hi(Max).

Pressing "个Up" key advances to Auto scroll selection screen

Pressing the " $\sqrt{ }$ Down" key will enter the "Reset option" mode and scroll through Parameter and wrapping back to None.

Reset option select, (Resets ALL resettable parameter)
The user has scrolled through to the "ALL" .
Pressing "个Up" key will select the value and advance to the "Reset ALL Confirmation" Mode \& Will reset all resettable parameter.

Reset ALL Confirmation．
Pressing the＂l Down＂key will re－enter the ＂Reset option Select mode．

Pressing＂个Up＂key resets ALL the readings and advances to the Auto scroll．

Reset option select，（Reset Energy）
The user has scrolled through to the＂E＂Energy value．

Pressing＂个Up＂key will select the value and advance to the＂Reset Energy Confirmation＂Mode．

Reset Energy Confirmation．
Pressing the＂$\sqrt{ }$ Down＂key will re－enter the＂Reset option＂mode．

Pressing＂个Up＂key resets the all Energy parameters and advances to the Auto scroll setting． （see section 3．2．7．）

### 3.2.7 Auto Scrolling :

This screen allows user to enable screen scrolling.
Auto scrolling Edit.
Pressing " $\boldsymbol{\uparrow}$ Up" key accepts the present status and advance to the Low Current noise cutoff (See Section 3.2.8).

Pressing the " $\sqrt{ }$ Down" key will enter the "Auto Screen Scrolling Edit" and toggle the status 'Yes' and 'No'.

Pressing the " $\boldsymbol{\tau}$ Up" key will select the status displayed and advance to the Low Current noise cutoff (See Section 3.2.8)

### 3.2.8 Low Current noise cutoff.

This screen allows the user to set Low noise current cutoff in mA.

Low current cutoff Edit.
Pressing " $\boldsymbol{\uparrow}$ Up" key accepts the present value and advance to Rs485 address selection.
(See section 3.2.9)
Pressing the " Down" key will enter the "Low current noise cutoff Edit" mode and scroll the "Value" through $0 \& 30$ and wrapping back to 0 . Setting 30 will display measured currents as 0 below 30 mA .

Low current noise cutoff Confirmation.
pressing the " $\sqrt{ }$ Down" key will re-enter the "Low current Noise cutoff Edit" mode.

Pressing " $\boldsymbol{\sim}$ Up" key set displayed value and Advance to the Rs485 address selection. (See section 3.2.9)

### 3.2.9 RS 485 Address Selection:

This screen applies to the RS 485 output only. This screen allows the user to set RS485 address for instruments The range of allowable address is 1 to 247 .
Enter Address, prompt for first digit.
(* Denotes that decimal point will be flashing).
Press the "Down" key to scroll the value of the first digit
Press the " $\boldsymbol{\sim}$ Up" key to advance to next digit.

Enter Address, first digit entered, prompt for second digit (* Denotes that decimal point will be flashing).

Use the " Down" key to scroll the value of the second digit

Press the " $\boldsymbol{\sim}$ Up" key to advance to next digit.

Enter Address, second digit entered, prompt for third digit (* Denotes that decimal point will be flashing).

Use the "』 Down" key to scroll the value of the third digit

Address confirmation Screen.
This Screen confirms the Address set by user .
Press the " $\boldsymbol{\top}$ Up" key to advance to next Screen "Rs485 Baud Rate" (See Section 3.2.10)

Pressing the " Down" key will reenter the "Address Edit" mode.

### 3.2.10 RS 485 Baud Rate :

This screen allows the user to set Baud Rate of RS 485 port.

The values displayed on screen are in kbaud .
Pressing " $\uparrow$ Up" key accepts the present value and advance to the Parity Selection (see section 3.2.11).

Pressing the " Down" key will enter the "Baud Rate Edit" mode and scroll the value through 2.4, 4.8, 9.6, 19.2 and back to 2.4

RS 485 Baud Rate confirmation :
Pressing " $\sqrt{ }$ Down" key will be re-enter into Baud Rate Edit mode.

Pressing the "个Up" key will select the value and advances to the Parity Selection (see section 3.2.11).

### 3.2.11 RS 485 Parity Selection :

This screen allows the user to set Parity \& number of stop bits of RS 485 port.

Pressing " $\mathbf{U}$ Up" key accepts the present value and advance to the Pulse output 1 selection (see section 3.2.12).
Pressing the " $\sqrt{ }$ Down" key will enter the "Parity \& stop bit Edit" mode and scroll the value through
odd : odd parity with one stop bit
no 1 : no parity with one stop bit
no 2 : no parity with two stop bit
E : even parity with one stop bit

RS 485 Parity confirmation :
Pressing " Down" key will be re-enter into Parity Edit mode.

Pressing the "个Up" key will set the value and advances to the Pulse output Selection (see section 3.2.12).

### 3.2.12. Assignment of Energy to pulse output 1 :

This screen allows the user to assign pulse output1 to energy

Pressing "个Up" key accepts the present setting and advance to "Assignment of Energy to Pulse Output 2"(see section 3.2.13).

Pressing the " $\sqrt{ }$ Down" key will enter into edit mode and scroll through the energy setting
A-E:Apparent Energy
I-E : Import Energy ( Active )
E-E: Export Energy (Active)
I-rE : Import Reactive Energy
E-rE : Export Reactive Energy

Pulse output1 confirmation :
Pressing " Down" key will be re-enter into edit mode.

Pressing the "个Up" key will set the value and advances to the "Assignment of Energy to pulse output 2"(see section 3.2.13).

## 3．2．13．Assignment of Energy to pulse output 2 ：

This screen allows the user to assign pulse output 2 to energy

Pressing＂个Up＂key accepts the present setting and advance to＂Pulse Duration＂（see section 3．2．14）．
Pressing the＂Down＂key will enter into edit mode and scroll through the energy setting

A－E：Apparent Energy<br>I－E：Import Energy（Active ）<br>E－E ：Export Energy（Active ）<br>I－rE：Import Reactive Energy<br>E－rE ：Export Reactive Energy

Pulse output 2 confirmation ：
Pressing＂Down＂key will be re－enter into edit mode．

Pressing the＂个Up＂key will set the value and advances to the＂Pulse duration＂（see section 3．2．14）．

### 3.2.14 Pulse Duration :

This screen applies to the Relay Pulsed output only.
This screen allows the user to set Relay energise time in milliseconds.

## Pulse Duration Edit.

Pressing "个Up" key accepts the present value and advance to the Pulse rate (see section 3.2.15).

Pressing the " $\sqrt{ }$ Down" key will enter the "Pulse Duration Edit" mode and scroll the value through $60,100,200$ and wrapping back to 60.

Pressing the " $\boldsymbol{\uparrow}$ Up" key will select the value and advances to "Pulse Duration Confirmation".

Pulse Duration Confirmation.
This screen will only appear following an edit of the Pulse duration.
pressing the " $\sqrt{ }$ Down" key will re-enter the "Pulse Duration Edit" mode.

Pressing "个Up" key set displayed value and will advance to Pulse rate (see section 3.2.15)

### 3.2.15. Pulse Rate

This screen applies to the Relay Output option only. The screen allows user to set the energy pulse rate divisor. Divisor values can be selected through 1,10,100,1000 in Wh .

Pressing "个 Up" key accepts the presents value and advances to the "Analog output 1" menu (See section 3.2.16).

Pressing the " $\sqrt{ }$ Down" key will enter the "Pulse rate divisor Edit" mode and scroll the value through the values $1,10,100,1000$ wrapping back to 1 in Wh but in KWh \& MWh pulse rate divisor is only 1.

Pressing the "个Up" key advances to the "Pulse rate Divisor Confirmation" menu.

Pulse Rate Divisor Confirmation.
This screen will only appear following an edit of the Pulse rate divisor.

If the Pulse rate shown is not correct, pressing the "DDown" key will return to the "Pulse rate divisor Edit" stage by blanking the bottom line of the display.

Pressing " $\uparrow$ Up" key sets the displayed value and will advance to the "Analog output 1" menu.

### 3.2.16 Analog Output 1 Selection: (Optional)

This screen is for analog output 1 only. It allows the user to set analog output 1 to corresponding measured parameter. Refer table "Parameter for Analog output ".

Pressing " $\boldsymbol{\sim}$ Up" key accepts the present value and advance to the Analog output 2 selection (see section 3.2.17).

Pressing the " Down" key will enter the
"Analog output 1 Edit" mode and scroll the values, as per Table "Parameter for Analog output"

Pressing the "个Up" key advance to the Analog output 1 confirmation screen .

Analog output 1 Confirmation :
Pressing the " $\sqrt{ }$ Down" key will re-enter the "Analog output 1 Edit"
Pressing the "个Up" key sets the displayed value and will advance to the Analog output 2 selection ( see section 3.2.17)

## 3．2．17 Analog Output 2 Selection ：（Optional ）

This screen is for analog output 2 only．It allows the user to set analog output 2 to corresponding measured parameter ．Refer table＂Parameter for Analog output＂．

Pressing＂个Up＂key accepts the present value and advances to Energy update rate screen．

Pressing the＂$\sqrt{ }$ Down＂key will enter the＂Analog output 2 Edit＂mode and scroll the values，as per Table＂Parameter for Analog output＂

Pressing the＂甾Up＂key advance to the Analog output 2 confirmation screen ．

Analog output 2 Confirmation ：
Pressing the＂Down＂key will re－enter the
＂Analog output 2 Edit＂
Pressing the＂ヘUp＂key sets the displayed value and will advances to Energy update rate screen．

## 3．2．18 Energy Update Rate ：

This screen is for energy update rate．it allows user to set energy update rate in minutes．It is settable from 1 to 60 min ．

Pressing the＂个Up＂key sets the displayed value and will advances to Energy digit reset count screen．

Pressing the＂几．Down＂key will enter the Energy update rate edit mode．This will scroll the value of most significant digit．

Pressing＂个Up key＂will advance to next less significant digit．（＊Denotes that decimal point is flashing）．
Pressing the＂Down＂key will scroll the value of second digit．
Pressing＂ひUp key＂will advance to Energy update rate confirmation screen．Pressing the ＂$\sqrt{ }$ Down＂key will re－enter Energy update rate edit mode．

Pressing the＂个Up＂key sets the displayed value and advances to Energy digit reset count＂ menu．

## 3．2．19 Energy Digit reset count ：

This screen enables user for setting maximum energy count＂after which energy will rollback to zero depends upon setting of Wh，KWh，\＆MWh．

Pressing the＂ $\boldsymbol{\sim}$ Up＂key sets the displayed value and will advance to Energy display on Modbus menu．

Pressing the＂$\sqrt{ }$ Down＂key will enter the Energy digit reset count edit mode．This will scroll the value of reset count from7 to 14 for Wh，from 7 to 12 for KWh \＆from 7 to 9 for MWh．

Ex．If energy display on modbus is set Wh \＆It will set Energy digit count to 10 then energy will reset after＂ $9,999,999,999$＂\＆then will Rollback to zero．

Pressing＂个Up key＂will advance to Energy digit reset count confirmation screen． Pressing the＂$\sqrt{ }$ Down＂key will re－enter Energy digit reset count edit mode．

Pressing the＂个Up＂key sets the displayed value and will advance to＂Energy on Modbus menu．

## Note ：

1）Default value is set to＂ 14 ＂i．e if energy count crosses 14 digit it will rollback to zero．
2）Energy displays on modbus is set to（2）\＆energy digit reset count is set to 12. Energy screen on display will show＂－－－－－－－＂i．e energy overflow ．when energy crosses the 11 digit count．
3）Energy displays on modbus is set to（3）\＆energy digit reset count is set to 9 ．Energy screen on display will show＂－－．．．－－＂i．e energy overflow ．when energy crosses the 8 digit count．

## 3．2．20 Energy Display on modbus

This screen enable user to set energy in terms of Wh／KWh／MWh on RS 485 Output depending as per the requirement ．Same applicable for all types of energy．

Pressing＂个Up＂key accepts the presents value and returns to measurement screen．

Pressing the＂—Down＂key will enter the＂Energy Display On Modbus Edit＂mode and scroll the value through the values 1,2 \＆ 3 wrapping back to 1 ．
1 ：Energy In Wh
2 ：Energy in KWh
3：Energy in MWh．

Pressing the "ヘUp" key advances to the returns to Measurement screen.

Energy Display On Modbus Confirmation.
This screen will only appear following an edit of the Energy Display On Modbus.
Pressing the " $\sqrt{ }$ Down" key will enter the "Energy Display On Modbus Edit" stage by blanking the bottom line of the display.

Pressing "个Up" key sets the displayed value and will return to measurement screen.

## Note : Default value is set to ' 1 ' i.e. Energy on Modbus will be in terms of Wh/VArh/VAh resp.

## 4. Analog Output ( optional ) :

This module provides two d.c. isolated outputs .There are two output options

1) Two 0-1mA outputs, internally powered.
2) Two 4-20mA outputs, internally powered.

The $0-1 \mathrm{~mA}$ output module has an 0 V return on each end of the 4 way connector ( Please refer section 15 for connection details )

On both modules the output signals are present on pins A1(Analog Output 1) \& A2 (Analog Output 2)

These outputs can be individually assigned to represent any one of the measured and displayed Parameters.

All settlings are user configurable via the user interface screen. See Analog o/p selection ( section 3.2.16 \& section 3.2.17) for details .

* Note : Refer diagrams 1 \& 2

Diagram 1 : ( 4 - 20 mA )

Diagram 2: (0-1mA)

TABLE 2 : Parameter for Analog Output

| Sr. |  |  |  |  | Range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. | Parameter | 1P 2W | 3P 4W | 3P 3W | Analog Output |
| 0 | None | $\checkmark$ | $\checkmark$ | $\checkmark$ | - |
| 1 | INPUT VOLTAGE L1 | $\checkmark$ | $\checkmark$ | $\checkmark$ | 0-100\% |
| 2 | INPUT VOLTAGE L2 | $x$ | $\checkmark$ | $\checkmark$ | 0-100\% |
| 3 | INPUT VOLTAGE L3 | $\times$ | $\checkmark$ | $\checkmark$ | 0-100\% |
| 4 | INPUT CURRENT IL1 | $\checkmark$ | $\checkmark$ | $\checkmark$ | 0-100\% |
| 5 | INPUT CURRENT IL2 | $\times$ | $\checkmark$ | $\checkmark$ | 0-100\% |
| 6 | INPUT CURRENT IL3 | $\times$ | $\checkmark$ | $\checkmark$ | 0-100\% |
| 7 | ACTIVE POWER L1 | $\checkmark$ | $\checkmark$ | x | 0-120\% |
| 8 | ACTIVE POWER L2 | $\times$ | $\checkmark$ | $\times$ | 0-120\% |
| 9 | ACTIVE POWER L3 | $\times$ | $\checkmark$ | $\times$ | 0-120\% |
| 10 | APPARENT POWER L1 | $\checkmark$ | $\checkmark$ | $\times$ | 0-120\% |
| 11 | APPARENT POWER L2 | $x$ | $\checkmark$ | $x$ | 0-120\% |
| 12 | APPARENT POWER L3 | $x$ | $\checkmark$ | $\times$ | 0-120\% |
| 13 | REACTIVE POWER L1 | $\checkmark$ | $\checkmark$ | $x$ | 0-120\% |
| 14 | REACTIVE POWER L2 | $\times$ | $\checkmark$ | $x$ | 0-120\% |
| 15 | REACTIVE POWER L3 | $\times$ | $\checkmark$ | $\times$ | 0-120\% |
| 16 | POWER FACTOR L1 | $\checkmark$ | $\checkmark$ | $\times$ | 181\% $1 /$ / $180^{\circ}$ |
| 17 | POWER FACTOR L2 | $x$ | $\checkmark$ | $\times$ | 181\% $10 / 180^{\circ}$ |
| 18 | POWER FACTOR L3 | $x$ | $\checkmark$ | $x$ | 181/0/-180 ${ }^{\circ}$ |
| 19 | PHASE ANGLEL1 | $\checkmark$ | $\checkmark$ | $x$ | 181\% ${ }^{\circ} /-180^{\circ}$ |
| 20 | PHASE ANGLE L2 | $x$ | $\checkmark$ | $x$ | 181\% 1 / $180^{\circ}$ |
| 21 | PHASE ANGLEL3 | $x$ | $\checkmark$ | $\times$ | 181/0/-180 ${ }^{\circ}$ |
| 22 | VOLTAGE AVG | $x$ | $\checkmark$ | $\checkmark$ | 0-100\% |
| 24 | CURRENT AVG | $\times$ | $\checkmark$ | $\checkmark$ | 0-100\% |

| Sr. <br> No. | Parameter |  | 1P 2W | 3P 4W | 3P 3W |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  | ACTIVE POWER SUM | $\mathbf{x}$ | $\checkmark$ | $\checkmark$ | Ralog Output |
| 29 | APPARENT POWER SUM | $\mathbf{x}$ | $\checkmark$ | $\checkmark$ | $0-120 \%$ |
| 31 | REACTIVE POWER SUM | $\mathbf{x}$ | $\checkmark$ | $\checkmark$ | $0-120 \%$ |
| 32 | POWER FACTOR AVG | $\mathbf{x}$ | $\checkmark$ | $\checkmark$ | $181^{\circ} / 0 /-180$ |
| 34 | PHASE ANGLE AVG | $\mathbf{x}$ | $\checkmark$ | $\checkmark$ | $181^{\circ} / 0 /-180$ |
| 36 | Frequency | $\checkmark$ | $\checkmark$ | $\checkmark$ | 45 to 65 Hz |
| 101 | INPUT VOLTAGE L12 | $\mathbf{x}$ | $\checkmark$ | $\mathbf{x}$ | $0-100 \%$ |
| 102 | INPUT VOLTAGE L23 | $\mathbf{x}$ | $\checkmark$ | $\mathbf{x}$ | $0-100 \%$ |
| 103 | INPUT VOLTAGE L31 | $\mathbf{x}$ | $\checkmark$ | $\mathbf{x}$ | $0-100 \%$ |
| 113 | NEUTRAL CURRENT | $\mathbf{x}$ | $\checkmark$ | $\mathbf{x}$ | $0-100 \%$ |

Note : Parameters 1,2,3 are L-N Voltage for 3P 4W \& L-L Voltage for 3P 3W . (1) For Frequency $0 \%$ corresponds to $40 \mathrm{~Hz} \& 120 \%$ corresponds to 70 Hz .
(2) For Angle and PF 0\% corresponds to 0 Deg. \& 100\% corresponds to 360 Deg.

## 5. Relay output (Optional) :

This instrumentis provided with either 1 or 2 relay for pulse output.

## Pulse Output :

Pulse output is the potential free, very fast acting relay contact which can be used to drive an external mechanical counter for energy measurement.
This instrument's pulse output can be configured to any of the following parameter through setup parameter screen

1) Active Energy (Import)
2) Reactive Energy (Export)
3) Active Energy (Export)
4) Apparent Energy
5) Reactive Energy (Import)

TABLE 3 : Energy Pulse Rate Divisor
1.For Energy Output in Wh

|  | Pulse rate |  |
| :--- | :--- | :--- |
| Divisor | Pulse | System Power* |
| 1 | 1per Wh | Up to 3600W |
|  | 1per kWh | Up to 3600kW |
|  | 1per Mwh | Above 3600kW |
| 10 | 1per 10Wh | Up to 3600W |
|  | 1per 10kWh | Up to 3600kW |
|  | 1per 10MWh | Above 3600kW |
| 100 | 1per 100Wh | Up to 3600W |
|  | 1per 100kWh | Up to 3600kW |
|  | 1per 100MWh | Above 3600kW |
| 1000 | 1 per 1000Wh | Up to 3600W |
|  | 1 per 1000kWh | Up to 3600kW |
|  | 1per 1000MWh | Above 3600kW |

Pulse Duration $60 \mathrm{~ms}, 100 \mathrm{~ms}$ or 200 ms
2. For Energy Output in Kwh

|  | Pulse rate |  |
| :---: | :---: | :---: |
| Divisor | Pulse | System Power |
| 1 | 1 per kWh | Up to 3600W |
|  | 1 per 1000kWh | Up to 3600kW |
|  | 1 per 1000MWh | Above 3600kW |

## 3. For Energy Output in Mwh

|  | Pulse rate |  |
| :---: | :---: | :---: |
| Divisor | Pulse | System Power |
| 1 | 1 per Mwh | Up to 3600 W |
|  | 1 per 1000Mwh | Up to 3600 kW |
|  | 1 per 1000Gwh | Above 3600 kW |

Above options are also applicable for Apparent and Reactive Energy.

[^1]
## 6. RS 485 (ModBus ) Output :

This instrument supports MODBUS (RS485) RTU protocol( 2-wire ).
Connection should be made using twisted pair shielded cable. All "A" and "B" connections are daisy chained together. The screens should also be connected to the "Gnd" terminal. To avoid the possibility of loop currents, an Earth connection should be made at one point on the network.Loop (ring) topology does not require any termination load. Line topology may or may not require terminating loads depending on the type and length of cable used. The impedance of the termination load should match the impedance of the cable and be at bothends of the line. The cable should be terminated at each end with a 120 ohm (1/4 Watt min.) resistor.
RS 485 network supports maximum length of 1.2 km . Including the Master, a maximum of 32 instruments can be connected in Rs485 network. The permissible address range for the instrumentis between 1 and 247 for 32 instruments. Broadcast Mode (address 0 ) is not allowed.
The maximum latency time for the instrument is 200 ms i.e. this is the amount of time that can pass before the first response character is output.
After sending any query through software ( of the Master), it must allow 200 ms of time to elapse before assuming that the instrument is not going to respond. If slave does not respond within 200 ms , Master can ignore the previous query and can issue fresh query to the slave.

The each byte in RTU mode has following format:

|  | 8-bit binary, hexadecimal 0-9, A-F <br> 2 hexadecimal characters contained in each 8-bit field of <br> the message |
| :--- | :--- |
| Format of Data Bytes | 4 bytes (32 bits) per parameter. <br> Floating point format ( to IEEE 754) <br> Most significant byte first (Alternative least significant byte first) |
| Error Checking Bytes | 2 byte Cyclical Redundancy Check (CRC) |
| Byte format | 1 start bit, <br> 8 data bits, least significant bit sent first <br> 1 bit for even/odd parity <br> 1 stop bit if parity is used; 1 or 2 bits if no parity |

Communication Baud Rate is user selectable from the front panel between 2400, 4800, 9600,19200 bps.
Function code :

| 03 | Read Holding Registers | Read content of read /write location (4X) |
| :---: | :--- | :--- |
| 04 | Read input Registers | Read content of read only location (3X) |
| 16 | Presets Multiple Registers | Set the content of read / write locations (4X) |

Exception Cases : An exception code will be generated when the instrument receives ModBus query with valid parity \& error check but which contains some other error (e.g. Attempt to set floating point variable to an invalid value ) The response generated will be "Function code" Ored with HEX (80H ). The exception codes are listed below

| 01 | Illegal function | This function code is not supported by the instrument. |
| :---: | :--- | :--- |
| 02 | Illegal Data <br> Address | Attempt to access an invalid address or an attempt to read <br> or write part of a floating point value |
| 03 | Illegal Data <br> Value | Attempt to set a floating point variable to an invalid value |

## Accessing 3 X register for reading measured values:

Two consecutive 16 bit registers represent one parameter. Refer table 4 for the addresses of 3 X registers (Parameters measured by the instruments).
Each parameter is held in the 3 X registers. Modbus Code 04 is used to access all parameters.

## Example :

To read parameter,
Volts 3: Start address $=04$ (Hex) $\quad$ Number of registers $=02$
Note : Number of registers $=$ Number of parameters $\times 2$
Each Query for reading the data must be restricted to 20 parameters or less. Exceeding the 20 parameter limit will cause a ModBus exception code to be returned.

Query :

| $01(\mathrm{Hex})$ | $04(\mathrm{Hex})$ | $00(\mathrm{Hex})$ | $04(\mathrm{Hex})$ | $00(\mathrm{Hex})$ | $02(\mathrm{Hex})$ | $30(\mathrm{Hex})$ | $0 \mathrm{~A}(\mathrm{Hex})$ |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Device <br> Address | Function <br> Code | Start Address <br> High | Start Address <br> Low | Number of <br> Registers Hi | Number of <br> Registers Lo | CRC <br> Low | CRC <br> High |

Start Address High : Most significant 8 bits of starting address of the parameter requested. Start Address low :Least significant 8 bits of starting address of the parameter requested.

Number of register Hi : Most significant 8 bits of Number of registers requested.
Number of register Lo : Least significant 8 bits of Number of registers requested.
(Note : Two consecutive 16 bit register represent one parameter.)
Response: Volt3 (219.25V)

| $01(H e x)$ | $04(H e x)$ | $04(H e x)$ | 43 (Hex) | $5 B(H e x)$ | $41(H e x)$ | $21(H e x)$ | $6 F(H e x)$ | $9 B(H e x)$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Device <br> Address | Function <br> Code | Byte <br> Count | Data Register1 <br> High Byte | Data Register1 <br> Low Byte | Data Register2 <br> High Byte | Data Register2 <br> Low Byte | CRC <br> Low | CRC <br> High |

Byte Count : Total number of data bytes received.
Data register 1 High Byte : Most significant 8 bits of Data register 1 of the parameter requested.
Data register 1 Low Byte : Least significant 8 bits of Data register 1 of the parameter requested.
Data register 2 High Byte : Most significant 8 bits of Data register 2 of the parameter requested.
Data register 2 Low Byte : Least significant 8 bits of Data register 2 of the parameter requested.
(Note : Two consecutive 16 bit register represent one parameter.)
Table 4 : 3 X register addresses (measured parameters)

| Address <br> (Register) | Sr. | No. | Parameter | Modbus Start Address Hex |  | 1P 2W | 3P 4W |
| :---: | :---: | :--- | :---: | :---: | :---: | :---: | :---: |
|  | 3P 3W |  |  |  |  |  |  |
| 30001 | 1 | Volts 1 | 00 | 0 | $\checkmark$ | $\checkmark$ | $\checkmark$ |

Note : Parameters 1,2,3 are L-N Voltage for 3P 4W \& L-L Voltage for 3P 3W.

## Accessing 4 X register for Reading \& Writing :

Each setting is held in the 4 X registers .ModBus code 03 is used to read the current setting and code 16 is used to write/change the setting. Refer Table 5 for 4 X Register addresses.
Example : Reading System type
System type : $\quad$ Start address $=0 \mathrm{~A}$ (Hex) $\quad$ Number of registers $=02$
Note : Number of registers = Number of Parameters x 2
Query :

| Device Address | $01(\mathrm{Hex})$ |
| :--- | :---: |
| Function Code | $03(\mathrm{Hex})$ |
| Start Address High | $00(\mathrm{Hex})$ |
| Start Address Low | $0 \mathrm{~A}(\mathrm{Hex})$ |
| Number of Registers Hi | $00(\mathrm{Hex})$ |
| Number of Registers Lo | $02(\mathrm{Hex})$ |
| CRC Low | E4 (Hex) |
| CRC High | $09(\mathrm{Hex})$ |

Start Address High : Most significant 8 bits of starting address of the parameter requested.
Start Address low :Least significant 8 bits of starting address of the parameter requested.
Number of register Hi: Most significant 8 bits of Number of registers requested.
Number of register Lo : Least significant 8 bits of Number of registers requested. (Note : Two consecutive 16 bit register represent one parameter.)

Response: System Type ( 3 phase 4 wire $=3$ )

| Device Address | 01 (Hex) |
| :--- | :--- |
| Function Code | $03(\mathrm{Hex})$ |
| Byte Count | 04 (Hex) |
| Data Register1 High Byte | $40(\mathrm{Hex})$ |
| Data Register1Low Byte | $40(\mathrm{Hex})$ |
| Data Register2 High Byte | $00(\mathrm{Hex})$ |
| Data Register2 Low Byte | $00(\mathrm{Hex})$ |
| CRC Low | EE (Hex) |
| CRC High | $27(\mathrm{Hex})$ |

Byte Count : Total number of data bytes received.
Data register 1 High Byte : Most significant 8 bits of Data register 1 of the parameter requested.
Data register 1 Low Byte : Least significant 8 bits of Data register 1 of the parameter requested.
Data register 2 High Byte : Most significant 8 bits of Data register 2 of the parameter requested.
Data register 2 Low Byte : Least significant 8 bits of Data register 2 of the parameter requested.
(Note : Two consecutive 16 bit register represent one parameter.)

## Example : Writing System type

System type : $\quad$ Start address $=0 \mathrm{~A}(\mathrm{Hex}) \quad$ Number of registers $=02$
Query:( Change System type to 3phase 3wire = 2 )

| Device Address | $01(\mathrm{Hex})$ |
| :--- | :--- |
| Function Code | $10(\mathrm{Hex})$ |
| Starting Address Hi | $00(\mathrm{Hex})$ |
| Starting Address Lo | $0 \mathrm{~A}(\mathrm{Hex})$ |
| Number of Registers Hi | $00(\mathrm{Hex})$ |
| Number of Registers Lo | $02(\mathrm{Hex})$ |

| Byte Count | 04 (Hex) |
| :--- | :--- |
| Data Register-1High Byte | $40(\mathrm{Hex})$ |
| Data Register-1 Low Byte | $00(\mathrm{Hex})$ |
| Data Register-2 High Byte | $00(\mathrm{Hex})$ |
| Data Register-2 Low Byte | $00(\mathrm{Hex})$ |
| CRC Low | $66(\mathrm{Hex})$ |
| CRC High | $10(\mathrm{Hex})$ |

Byte Count : Total number of data bytes received.
Data register 1 High Byte : Most significant 8 bits of Data register 1 of the parameter requested. Data register 1 Low Byte : Least significant 8 bits of Data register 1 of the parameter requested. Data register 2 High Byte : Most significant 8 bits of Data register 2 of the parameter requested. Data register 2 Low Byte : Least significant 8 bits of Data register 2 of the parameter requested. (Note : Two consecutive 16 bit register represent one parameter.)
Response:

| Device Address | 01 (Hex) |
| :--- | :--- |
| Function Code | 10 (Hex) |
| Start Address High | $00(\mathrm{Hex})$ |
| Start Address Low | 0 A(Hex) |
| Number of Registers Hi | 00 (Hex) |
| Number of Registers Lo | $02(\mathrm{Hex})$ |
| CRC Low | 61 (Hex) |
| CRC High | CA (Hex) |

Start Address High : Most significant 8 bits of starting address of the parameter requested. Start Address low :Least significant 8 bits of starting address of the parameter requested. Number of register Hi : Most significant 8 bits of Number of registers requested. Number of register Lo : Least significant 8 bits of Number of registers requested. (Note : Two consecutive 16 bit register represent one parameter.)

## Table 5: 4 X register addresses

| Address (Register) | $\begin{array}{\|c\|} \hline \text { Parameter } \\ \text { No. } \\ \hline \end{array}$ | Parameter | Read / Write | Modbus Start Address Hex |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | High Byte | Low Byte |
| 40005 | 3 | Energy on RS485 | R/Wp | 00 | 04 |
| 40007 | 4 | Sys Voltage | R | 00 | 06 |
| 40009 | 5 | Sys Current | R | 00 | 08 |
| 40011 | 6 | Sys Type | RWp | 00 | OA |
| 40013 | 7 | Pulse Width | R/Wp | 00 | OC |
| 40015 | 8 | Reset parameters | Wp | 00 | OE |
| 40019 | 10 | RS 485 Set-up Code | RWp | 00 | 12 |
| 40021 | 11 | Node Address. | R/Wp | 00 | 14 |
| 40023 | 12 | Pulse Divisor | R/Wp | 00 | 16 |
| 40025 | 13 | Min Reset | Wp | 00 | 18 |
| 40027 | 14 | Max Reset | Wp | 00 | 1 A |
| 40029 | 15 | Analog Out 1-Para sel | RWp | 00 | 1 C |
| 40031 | 16 | Analog Out 2- Para sel | R/Wp | 00 | 1 E |
| 40033 | 17 | PT Primary | R/Wp | 00 | 20 |
| 40035 | 18 | CT Primary | R/Wp | 00 | 22 |

| Address (Register) | ParameterNo. | Parameter | Read / Write | Modbus Start Address Hex |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | High Byte | Low Byte |
| 40037 | 19 | System Power | R | 00 | 24 |
| 40039 | 20 | Energy digitreset count | RWp | 00 | 26 |
| 40041 | 21 | Register Order/Word Order | R/Wp | 00 | 28 |
| 40043 | 22 | CT Secondary | R/Wp | 00 | 2A |
| 40045 | 23 | PT Secondary | R/Wp | 00 | 2 C |
| 40049 | 25 | Pulse1 Parameter select | R/Wp | 00 | 30 |
| 40061 | 31 | Pulse2 Parameter select | R/Wp | 00 | 3 C |
| 40071 | 36 | Password | RW | 00 | 46 |
| 40077 | 39 | Auto Scroll | RW | 00 | 4 C |

| 40123 | 62 | Varh Import Overflow Start Count | R/Wp | 00 | 7A |
| 40125 | 63 | Varh Export Overflow Start Count | R/Wp | 00 | 7 C |
| 40127 | 64 | Vah Overflow Start Count | R/Wp | 00 | 7E |

## Explanation for 4 X register :

| Address | Parameter | Description |
| :---: | :---: | :---: |
| 40005 | Energy display on Modbus | This address is used to set energy display on MODBUS in Wh, KWh \& Mwh. Write one of the following value to this address. <br> 1 = Energy in Wh. 2 = Energy in KWh. <br> 3 = Energy in MWh. |
| 40007 | System Voltage | This address is read only and displays System Voltage |
| 40009 | System Current | This address is read only and displays System Current |
| 40011 | System Type | This address is used to set the System type. Write one of the following value to this address. $1=1$ Phase 2 Wire (Read only for 1P2W) $2=3$ Phase 3 Wire $3=3$ Phase 4 Wire. Writing any other value will return error . |
| 40013 | Pulse Width of Relay | This address is used to set pulse width of the Pulse output. Write one of the following values to this address: <br> 60: 60 ms <br> 100: $\quad 100 \mathrm{~ms}$ <br> 200: 200 ms <br> Writing any other value will return error . |
| 40015 | Reset Parameters | This address is used to reset the parameters by writing following $0 \text { : Energy reset } \quad 2 \text { : Sys. Min reset }$ <br> 3 : Sys. Max reset 6 : Reset all. <br> Writing any other value will return an error. |

| Address | Parameter | Description |
| :---: | :--- | :--- |
| 40019 | Rs485 Set-up <br> Code | This address is used to set the baud rate, Parity, Number of <br> stop bits. Refer to Table 6 for details. |
| 40021 | Node <br> Address | This register address is used to set Device address <br> between 1 to 247. |
| 40023 | Pulse Divisor | This address is used to set pulse divisor of the Pulse output. <br> Write one of the following values to this address for Wh: <br> $1: \quad$ Divisor 1 <br> $10: \quad$ Divisor 10 <br> $100: \quad$ Divisor 100 <br> 1000 : Divisor 1000 \& in KWh \& MWh Divisior will be 1 default <br> Writing any other value will return an error. <br> Pulse rate divisor is set to 1, when Energy on Rs485 is set <br> to kWh or MWh. |
| 40025 | Min - Reset | This address is used to reset the Min parameters value. <br> Write Zero value to this register to reset the Min parameters. <br> Writing any other value will return an error. |
| 40027 | Max - Reset | This address is used to reset the Max parameters value. <br> Write Zero value to this register to reset the Max parameters. <br> Writing any other value will return an error. |
| 40029 | Analog Out 1- <br> Para Set | This address is used to set the parameter for Analog Output 1. <br> Write one of the parameter no. As per the options given in <br> Table 2 for Analog Output Parameters. <br> Writing any other value will return an error. |
| 40031 | Analog Out 2-- <br> Para Set | This address is used to set the parameter for Analog Output 2.. <br> Write one of the parameter no. As per the options given in <br> Table 2 for Analog Output Parameters. <br> Writing any other value will return an error. |

| Address | Parameter | Description |
| :---: | :--- | :--- |
| 40033 | PT Primary | $\begin{array}{l}\text { This address allows the user to set PT Primary value. } \\ \text { The maximum settable value is 692.8kV L-L } \\ \text { depends on the per phase 666.6MVA Restriction of power } \\ \text { combined with CT primary }\end{array}$ |
| 40035 | CT Pimary | $\begin{array}{l}\text { This address allows the user to set CT Primary value. } \\ \text { The maximum settable value is 9999 \& also depends on the per } \\ \text { phase 666.6MVA Restriction of power combined with PT primary }\end{array}$ |
| 40037 | Sys Power | $\begin{array}{l}\text { System Power (Read Only) is the Nominal system power based on } \\ \text { the values of Nominal system volts and Nominal system current. }\end{array}$ |
| 40039 | $\begin{array}{l}\text { Energy digit } \\ \text { Reset Count }\end{array}$ | $\begin{array}{l}\text { This address is used to set the rollover count for energy. If } \\ \text { Energy on Rs485 is in Wh rollover count can be from 7 to 14. } \\ \text { If it is in KWh then rollover count can be from 7 to 12 \& for MWh } \\ \text { rollover count can be from 7 to 9. }\end{array}$ |
| 40041 | Word Order | $\begin{array}{l}\text { Word Order controls the order in which the instrument receives } \\ \text { or sends floating - point numbers:- normal or reversed register }\end{array}$ |
| order.In normal mode, the two registers that make up a floating |  |  |
| point numbers are sent most significant bytes first. |  |  |
| In reversed register mode, the two registers that make up |  |  |
| a floating point numbers are sent least significant bytes first. |  |  |
| To set the mode, write the value '2141.0' into this register- |  |  |
| the instrument will detect the order used to send this value and |  |  |
| set that order for all ModBus transaction involving floating point |  |  |
| numbers. |  |  |$\}$

| Address | Parameter | $\quad$ Description |
| :---: | :--- | :--- |
| 40043 | CT secondary | This address is used to read and write the CT secondary value <br> write one of the following values to this address. <br> 1=1A CT secondary <br> $5=5$ A CT secondary <br> writing any other value will return an error. |
| 40045 | PT secondary | This address is used to read and write the PT secondary value. <br> The valid range for PT Secondary is 100 VLL to 600 VLL. |
| 40049 | Pulse 1 <br> parameter <br> select | This address is used to assign the Parameter to Relay1 <br> refer table 7. |
| 40061 | Pulse 2 <br> Sarameter | This address is used to assign the Parameter to Relay2 <br> refer table 7. |
| 40071 | Password | This address is used to set \& reset the password. <br> Valid Range of Password can be set is 0000 - 9999. . <br> 1) If password lock is present \& if this location is read it will <br> return zero. <br> 2) If Password lock is absent \& if this location is read it will <br> return One. |
| 3) If password lock is present \& to disable this lock |  |  |
| first send valid password to this location then write "0000" |  |  |
| to this location |  |  |
| 4) If password lock is present \& to modify 4X parameter |  |  |
| first send valid password to this location so that 4X parameter |  |  |
| will be accessible for modification. |  |  |
| 5) If for in any of the above case invalid password is send then |  |  |
| meter will return exceptional error 2. |  |  |$|$

| Address | Parameter | Description |
| :---: | :---: | :---: |
| 40077 | Auto <br> Scroll | This address is used to activate or de-activate the Auto scroll setting. <br> 0-Deactivate <br> 1 (Decimal)-Activate <br> Writing any other value will return an error. |
| 40079 | 30 mA Noise <br> current <br> Elimination | This address is used to activate or de-activate the 30 mA noise current elimination write <br> 0 -Deactivate <br> 30 (Decimal)-Activate <br> Writing any other value will return an error. |
| 40081 | Energy Update Rate | Energy Update Rate is the time after which energy registers are updated. This time is user settable from 1-60 minutes. |
| 40083 | Model Number | This Address is Read Only. This Address shows the Model Number of the meter |
| $\begin{aligned} & 40107 \\ & \text { to } \\ & 40117 \end{aligned}$ | Energy Start Count | The user can set respective energy starting count in these registers (before the user can write values to these locations user needs to check register 40005 i.e Energy on RS485 and register 40036 i.e Energy digit reset count). Valid range is 0-9999999. For E.g if Energy on RS485 is in K and Energy digit reset count is 7 the start count should be in k and value should be less than 7 digits. |

| Address | Parameter | Description |
| :---: | :--- | :--- |
| 40119 | Energy | The user can set respective Energy Overflow starting count |
| to | Overflow | in these registers. Valid range is 0-999999. |
| 40129 | Start |  |
|  | Count |  |

Table 6 : RS 485 Set-up Code

| Baud Rate | Parity | Stop Bit | Decimal value |

## NOTE:

Codes not listed in the table above may give rise to unpredictable results including loss of communication. Excise caution when attempting to change mode via direct Modbus writes.

Table 7 : Pulse1 \& Pulse2 Configuration

| Code | Configuration |
| :---: | :---: |
| 0 | Import Active Energy |
| 1 | Export Active Energy |
| 2 | Import Reactive Energy |
| 3 | Export Reactive Energy |
| 4 | Apparent Energy |

### 6.1 User Assignable Modbus Registers:

This instrument contains the 20 user assignable registers in the address range of $0 \times 200$ (30513) to 0x226 (30551) (see Table 8).

Any of the parameter addresses ( 3 X register addresses Table 4)) accessible in the instrument can be mapped to these 20 user assignable registers.
Parameters ( 3 X registers addresses ) that resides in different locations may be accessed by the single request by re-mapping them to adjacent address in the user assignable registers area.
The actual address of the parameters ( 3 X registers addresses) which are to be assessed via address $0 \times 200$ to $0 \times 226$ are specified in $4 \times$ Register $0 \times 200$ to $0 \times 213$ (see Table 9).
Table 8 : User Assignable 3X Data Registers

| Address <br> (Register) | Parameter <br> Number. | Assignable Register | Modbus Start Address (Hex) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | High Byte |  |  |  |
| 30513 | 257 | Assignable Reg 1 | 02 | 00 |

| 40532 | 276 | Mapped Add for register \#0x0226 | 02 | 13 |  |

## Example :

## Assigning parameter to user assignable registers

To access the voltage2 ( 3 X address $0 \times 0002$ ) and Power Factor1 ( 3 X address 0x001E) through user assignable register assign these addresses to $4 x$ register (Table 10 ) 0x0200 and $0 \times 0201$ respectively .

## Assigning Query:

| Device Address | $01(\mathrm{Hex})$ |
| :--- | :---: |
| Function Code | $10(\mathrm{Hex})$ |
| Starting Address Hi | $02(\mathrm{Hex})$ |
| Starting Address Lo | $00(\mathrm{Hex})$ |
| Number of Registers Hi | $00(\mathrm{Hex})^{*}$ |
| Number of Registers Lo | $02(\mathrm{Hex})^{*}$ |

| Byte Count | $04(\mathrm{Hex})$ |
| :--- | :--- |
| Data Register-1 High Byte | $00(\mathrm{Hex})$ |
| Data Register-1 Low Byte | $02(\mathrm{Hex})$ |
| Data Register-2 High Byte | $00(\mathrm{Hex})$ |
| Voltage 2 | (3X Address 0x0002) |
| Power Factor 1 * |  |

## Response:

| Device Address | $01(\mathrm{Hex})$ |
| :--- | :--- |
| Function Code | $10(\mathrm{Hex})$ |
| Start Address High | $02(\mathrm{Hex})$ |
| Start Address Low | $00(\mathrm{Hex})$ |
| Number of Registers Hi | $00(\mathrm{Hex})$ |
| Number of Registers Lo | $02(\mathrm{Hex})$ |
| CRC Low | $40(\mathrm{Hex})$ |
| CRC High | $70(\mathrm{Hex})$ |

Reading Parameter data through User Assignable Registers:
In assigning query Voltage2 and Power Factor1 parameters were assigned to 0x 200 and $0 \times 201$ (Table10) which will point to user assignable $3 \times r e g i s t e r s ~ 0 \times 200$ and $0 \times 202$ (table9). So to read Voltage2 and PowerFactor1 data reading query should be as below.

Query:

| Device Address | $01(\mathrm{Hex})$ |
| :--- | :--- |
| Function Code | $04(\mathrm{Hex})$ |
| Start Address High | $02(\mathrm{Hex})$ |
| Start Address Low | $00(\mathrm{Hex})$ |
| Number of Registers Hi | $00(\mathrm{Hex})$ |
| Number of Registers Lo | $04(\mathrm{Hex})^{* *}$ |
| CRC Low | $\mathrm{F0}(\mathrm{Hex})$ |
| CRC High | $71(\mathrm{Hex})$ |

Start Address High : Most significant 8 bits of starting address of User assignable register.
Start Address low :Least significant 8 bits of starting address of User assignable register.
Number of register Hi : Most significant 8 bits of Number of registers requested.
Number of register Lo : Least significant 8 bits of Number of registers requested.
**Note : Two consecutive 16 bit register represent one parameter.
Since two parameters are requested four registers are required
Response : (Volt2 = $219.30 /$ Power Factor1 $=1.0$ )

| Device Address | $01(\mathrm{Hex})$ |
| :--- | :--- |
| Function Code | $04(\mathrm{Hex})$ |
| Byte count | $08(\mathrm{Hex})$ |
| Data Register-1High Byte | $43(\mathrm{Hex})$ |
| Data Register-1 Low Byte | $5 \mathrm{~B}(\mathrm{Hex})$ |
| Data Register-2 High Byte | $4 \mathrm{E}(\mathrm{Hex})$ |
| Data Register-2 Low Byte | $04(\mathrm{Hex})$ |

| Data Register-3 High Byte | $3 \mathrm{~F} \mathrm{(Hex)}$ |
| :--- | :--- |
| Data Register-3 Low Byte | $80(\mathrm{Hex})$ |
| Data Register-4 High Byte | $00(\mathrm{Hex})$ |
| Data Register-4 Low Byte | $00(\mathrm{Hex})$ |
| CRC Low | $79(\mathrm{Hex})$ |
| CRC High | 3 F (Hex) |

| User Assignable mapping Registers |  |  | User Assignable Data Registers ( 3 X Registers Table 9 ) |  |
| :---: | :---: | :---: | :---: | :---: |
| Address) |  | Address) |  |  |
| 0x200 | Voltage 2 (0x0002) | $\rightarrow 0 \times 200$ | $\underset{(16 \text { bit })}{0 \times 20}$ | $0 \times 201$ |
| 0x201 | Power Factor 1 (0x001E) | $\rightarrow 0 \times 202$ | $\underset{(16 \mathrm{bit})}{0 \times 202}$ | $0 \times 203$ |
| 0x202 | Wh Import (0x0048) | $\rightarrow 0 \times 204$ | $0 \times 204$ | $0 \times 205$ |
| 0x203 | Frequency (0x0046) | $\rightarrow 0 \times 206$ | $\underset{(16 \mathrm{bit})}{0 \times 206}$ | $\underset{(16 \text { bit })}{0 \times 207}$ |
| ! | ! | ! |  |  |
| 0x212 | Current 1 (0x0006) | $\rightarrow 0 \times 224$ | $0 \times 224$ | $\underset{(16 \mathrm{bit})}{0 \times 25}$ |
| 0x213 | VAh (0x0050) | $\rightarrow->0 \times 226$ | $0 \times 226$ | $0 \times 227$ |

To get the data through User assignable Register use following steps:

1) Assign starting addresses(Table3) of parameters of interest to a "User assignable mapping registers" in a sequence in which they are to be accessed (see section "Assigning parameter to user assignable registers")
2) Once the parameters are mapped data can be acquired by using "User assignable data register " Starting address . i.e to access data of Voltage2, Power factor1,Wh import, Frequency send query with starting address 0x200 with number of register 8 or individually parameters can be accessed for example if current1 to be accessed use starting address $0 \times 212$. (See section Reading Parameter data through User Assignable Registers)

## 7.Phasor Diagram :

Quadrant 1: $0^{\circ}$ to $90^{\circ}$
Quadrant 2: $90^{\circ}$ to $180^{\circ}$

Quadrant 3: $180^{\circ}$ to $270^{\circ}$
Quadrant 4: $270^{\circ}$ to $360^{\circ}$

| Connections | Quadrant | Sign of <br> Active <br> Power (P) | Sign of <br> Reactive <br> Power (Q) | Sign of <br> Power <br> Factor (PF ) | Inductive I <br> Capacitive |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Import | 1 | +P | + Q | + | L |
| Import | 4 | +P | -Q | + | C |
| Export | 2 | -P | +Q | - | C |
| Export | 3 | -P | -Q | - | L |

Inductive means Current lags Voltage
Capacitive means Current leads Voltage
When the instrument displays Active power ( P )with " + " ( positive sign ) , the connection is "Import".

When the instrument displays Active power ( P ) with " - " ( negative sign ), the connection is "Export" .

## 8. Installation

Mounting is by four side clamps, slide the side clamps through side slot till side clamp gets firmly locked in a groove (Refer fig.) Consideration should be given to the space required behind the instrument to allow for bends in the connection cables.

As the front of the enclosure conforms to IP54 it is protected from water spray from all directions, additional protection to the panel may be obtained by the use of an optional panel gasket.
The terminals at the rear of the product should be protected from liquids.
The instrument should be mounted in a reasonably stable ambient temperature and where the operating temperature is within the range -10 to $55^{\circ} \mathrm{C}$. Vibration should be kept to a minimum and the product should not be mounted where it will be subjected to excessive direct sunlight.

## Caution

1. In the interest of safety and functionality this product must be installed by a qualified engineer, abiding by any local regulations.
2. Voltages dangerous to human life are present at some of the terminal connections of this unit. Ensure that all supplies are de-energised before attempting any connection or disconnection.
3. These products do not have internal fuses therefore external fuses must be used to ensure safety under fault conditions.

### 8.1 EMC Installation Requirements

This product has been designed to meet the certification of the EU directives when installed to a good code of practice for EMC in industrial environments, e.g.

1. Screened output and low signal input leads or have provision for fitting RF suppression components, such as ferrite absorbers, line filters etc., in the event that RF fields cause problems.

Note: It is good practice to install sensitive electronic instruments that are performing critical functions, in EMC enclosures that protect against electrical interference which could cause a disturbance in function.
2. Avoid routing leads alongside cables and products that are, or could be, a source of interference.
3. To protect the product against permanent damage, surge transients must be limited to 2 kV pk. It is good EMC practice to suppress differential surges to 2 kV at the source. The unit has been designed to automatically recover in the event of a high level of transients. In extreme circumstances it may be necessary to temporarily disconnect the auxiliary supply for a period of greater than 5 seconds to restore correct operation.

The Current inputs of these products are designed for connection in to systems via Current Transformers only, where one side is grounded.
4. ESD precautions must be taken at all times when handling this product.

### 8.2 Case Dimension and Panel Cut Out

### 8.3 Wiring

Input connections are made directly to screw-type terminals with indirect wire pressure. Numbering is clearly marked in the plastic moulding. Choice of cable should meet local regulations. Terminal for both Current and Voltage inputs will accept upto $3 \mathrm{~mm}^{2} \times 2$ diameter cables.

Note : It is recommended to use wire with lug for connection with meter.

### 8.4 Auxiliary Supply

The instrumentshould ideally be powered from a dedicated supply, however it may be powered from the signal source, provided the source remains within the limits of the chosen auxiliary voltage.

### 8.5 Fusing

It is recommended that all voltage lines are fitted with 1 amp HRC fuses.

### 8.6 Earth/Ground Connections

For safety reasons, CT secondary connections should be grounded in accordance with local regulations.
