	2.3 RS 485 Parity
	2.4 Quit Communication Parameters
3.	RS 485 ( ModBus ) Output
	3.1 Accessing 3X and 4X registers for Reading Measured values
	3.2 Accessing 4X register for Reading & Writing Settings
	3.3 Accessing 4X register for Long Energy Reading & Writing
	3.4 User Assignable Modbus Registers
4.	Datalogging
	4.1 Event Based Datalogging
	4.2 Time Based Datalogging
	4.3 Load Profile Datalogging
5.	Connection for Optional Pulse Output / Digital Input / RS 485 / Ethernet

## 1. Introduction

The Multifunction Instrument is a panel mounted 96 x 96mm DIN Quadratic Digital Panel Meter, which measures important electrical parameters in 3 ph 4 wire / 3 wire / 1ph Network and replaces the multiple analog panel meters. It measures electrical parameters like AC voltage, Current, Frequency, Power, Energy (Active / Reactive / Apparent), phase angle, power factor, individual harmonics & many more. The instrument integrates accurate measurement technology (All Voltage & Current measurements are True RMS up to 63rd Harmonic) with LCD display with backlight.

It can be configured & Programmed at site for the following : PT Primary, PT Secondary, CT Primary, CT Secondary 3 Phase 3W, 3 Phase 4W, 1 Phase 2W system.

The front panel has four push buttons using which the user can scroll through different screens & configure the instrument. The front panel also has Impulse red led, flashing at rate proportional to measured power.

Operation via standard RS485 is also possible. Through this optional interface all the above mentioned parameters can be configured and programmed. For modbus service, it is essential that device address, baud rate and parity should be configured properly.

This document specifies only the interface between a Master device and Meter for electrical parameter through MODBUS over RS485.

## 2. Communication Parameter Selection Screen

While using USB port communication the Configuration must be :

Device address: 001

Baud rate : 57600

Parity : None

Stop bit: 1

### 2.1 Address Setting

This screen applies to the RS 485 output only. This screen allows the user to set RS 485 address for the meter.

**The allowable range of addresses is 1 to 247.**

Press "▲" key to advance to "RS 485 Baud Rate" screen (see Section 2.2) or press the "▼" key to advance to the "Quit Communication Parameters" screen (see Section 2.4).

Press "←" to enter into edit mode, prompt for first digit. (Flashing digit indicates cursor position).

Press the "▲" and "▼" keys to scroll the value of the first digit. Press the "←" key to advance to next digit.

Similarly, enter second and third digits of address. After entering third digit, pressing "←" key confirms the selection and shows "Address Setting" screen (see Section 2.1).

### 2.2 RS 485 Baud Rate

This screen allows the user to set Baud Rate of RS 485 port. The values displayed on screen are in kbaud.

Pressing "▲" key accepts the present value and advance to the "RS 485 Parity Selection" screen (see Section 2.3) and pressing the "▼" key accepts the present value and advance to the "Address Setting" screen (see Section 2.1).

Pressing the "←" key advances to the "Baud Rate Edit" mode and "▲" & "▼" keys scrolls the value through **4.8, 9.6, 19.2, 38.4 and 57.6** kbaud.

Pressing the "←" key sets the value and shows the "RS 485 Baud Rate" screen (see Section 2.2).

## 2.3 RS 485 Parity

This screen allows the user to set Parity & number of stop bits of RS 485 port.

Pressing "▲" key accepts the present value and advances to "Quit Communication Parameters" screen (see section 2.4).

Similarly, pressing "▼" key accepts the present value and advances to "RS 485 Baud Rate" screen (see section 2.2).

Pressing the "←" key advances to the "Parity & Stop bit Edit" mode & keys "▲" and "▼" scrolls the value through:

**non1** : no parity with one stop bit      **non2** : no parity with two stop bit  
**EVEN** : even parity with one stop bit      **odd** : odd parity with one stop bit

Pressing "=" key sets the value and advances to "RS 485 Parity Selection" screen (see Section 2.3).

## 2.4 Quit Communication Parameters

This screen allows user to exit from system "Communication Parameter Selection" setup.

Pressing the "▲" key advances to Address Setting" screen (see Section 2.1).

Similarly, pressing the "▼" key advances to "RS 485 Parity" screen (see Section 2.3).

Pressing the "←" key advances to "Communication Parameter Selection" screen (see Section 2).

## 3. RS 485 ( ModBus ) Output :

THE MULTIFUNCTION INSTRUMENT supports MODBUS (RS485) RTU protocol (2-wire ) .

Connection should be made using twisted pair shielded cable. All "A" and "B" connections are daisy chained together. The screens should also be connected to the "Gnd" terminal. To avoid the possibility of loop currents, an Earth connection should be made at one point on the network. Loop (ring) topology does not require any termination load. Line topology may or may not require terminating loads depending on the type and length of cable used. The impedance of the termination load should match the impedance of the cable and be at both ends of the line. The cable should be terminated at each end with a 120 ohm (1/4 Watt min.) resistor.

RS 485 network supports maximum length of 1.2km. Including the Master, a maximum of 32 instruments can be connected in RS485 network. The permissible address range for The Meter is between 1 and 247 for 32 instruments. Broadcast Mode (address 0) is not allowed.

The maximum latency time of a Meter is 300 ms i.e. this is the amount of time that can pass before the first response character is output.

After sending any query through software (of the Master), it must allow 300ms of time to elapse before assuming that the Meter is not going to respond. If slave does not respond within 300 ms, Master can ignore the previous query and can issue fresh query to the slave.

Each byte in RTU mode has following format:

	8-bit binary, hexadecimal 0-9, A-F 2 hexadecimal characters contained in each 8-bit field of the message
<b>Format of Data Bytes</b>	4 bytes (32 bits) per parameter. Floating point format ( to IEEE 754) Most significant byte first (Alternative least significant byte first)
<b>Error Checking Bytes</b>	2 byte Cyclical Redundancy Check (CRC)
<b>Byte format</b>	1 start bit, 8 data bits, least significant bit sent first 1 bit for even/odd parity 1 stop bit if parity is used; 1 or 2 bits if no parity

Communication Baud Rate is user selectable from the front panel between 4800,9600,19200,38400,57600 bps.

**Function code :**

03	Read Holding Registers	Read content of read /write location ( 4X )
04	Read input Registers	Read content of read only location ( 3X )
16	Presets Multiple Registers	Set the content of read / write locations ( 4X )

**Exception Cases :** An exception code will be generated when Meter receives ModBus query with valid parity & error check but which contains some other error ( e.g. Attempt to set floating point variable to an invalid value) The response generated will be "Function Code" ORed with HEX (80H). The exception codes are listed below

01	Illegal function	The function code is not supported by Meter
02	Illegal Data Address	Attempt to access an invalid address or an attempt to read or write part of a floating point value
03	Illegal DataValue	Attempt to set a floating point variable to an invalid value

### 3.1 Accessing 3X and 4X register for reading measured values:

Two consecutive 16 bit registers represent one parameter. Refer **TABLE 1** for the addresses of 3X and 4X registers used for parameters measured by the instrument. Each parameter is held in the 3X as well as 4X registers. Modbus Code 04 and 03 are used to access all parameters in 3X and 4X registers respectively.

**Example :**

To read parameter,

Voltage2 from 3X: Start address= 00 02      Number of registers = 02

Watt2 from 4X: Start address= 00 0E      Number of registers = 02

**Note : Number of registers = Number of parameters x 2**

Each query for reading the data must be restricted to 40 parameters or less. Exceeding the 40 parameter limit will cause a ModBus exception code to be returned.

**Query for 3X read:**

01 (Hex)	04 (Hex)	00 (Hex)	02(Hex)	00 (Hex)	02(Hex)	30 (Hex)	0A (Hex)
Device Address	Function Code	Start Address High	Start Address Low	Number of Registers Hi	Number of Registers Lo	CRC Low	CRC High

**3X Response: Voltage 2 (219.254V)**

01 (Hex)	04 (Hex)	04 (Hex)	43 (Hex)	5B (Hex)	41 (Hex)	21 (Hex)	6F (Hex)	9B (Hex)
Device Address	Function Code	Byte Count	Data Register1 High Byte	Data Register1 Low Byte	Data Register2 High Byte	Data Register2 Low Byte	CRC Low	CRC High

Byte Count : Total number of data bytes received.

**Query for 4X read:**

01 (Hex)	03 (Hex)	00 (Hex)	0E(Hex)	00 (Hex)	02(Hex)	E0 (Hex)	C9 (Hex)
Device Address	Function Code	Start Address High	Start Address Low	Number of Registers Hi	Number of Registers Lo	CRC Low	CRC High

**4X Response: Watt2 (2000 W)**

01 (Hex)	03 (Hex)	04 (Hex)	44 (Hex)	FA (Hex)	00 (Hex)	00 (Hex)	CE (Hex)	F2 (Hex)
Device Address	Function Code	Byte Count	Data Register1 High Byte	Data Register1 Low Byte	Data Register2 High Byte	Data Register2 Low Byte	CRC Low	CRC High

Byte count : No. of Bytes Demanded by user in query.

Start Address High : Most significant 8 bits of starting address of the parameter requested.

Start Address low : Least significant 8 bits of starting address of the parameter requested.

Number of register Hi : Most significant 8 bits of Number of registers requested.

Number of register Lo : Least significant 8 bits of Number of registers requested.

Data register 1 High Byte : Most significant 8 bits of Data register 1 of the parameter requested.

Data register 1 Low Byte : Least significant 8 bits of Data register 1 of the parameter requested.

Data register 2 High Byte : Most significant 8 bits of Data register 2 of the parameter requested.

Data register 2 Low Byte : Least significant 8 bits of Data register 2 of the parameter requested.

**(Note : Two consecutive 16 bit register represent one parameter.)**

**TABLE 1 : 3 X and 4 X register addresses for measured parameters****TABLE 1.1 : 3 X and 4 X register addresses for Regular Parameters**

32113	42113	157	No of Interruption	08	40	08	40

**Note:**

\*1. The values are updated depending on update rate which is settable by user. For example, if user set update rate 15 min, then the values on these registers (marked with \*) will get updated every 15 min.

2. OVF stands for Overflow Count, and for 3P3W and 1P2W, phase-wise parameters are not available.

31491	41491	295	Tariff8 Source6 Energy OVF Count	05	D2	05	D2

- Note:**
- \*1. The values are updated depending on update rate which is settable by user. For example, if user set update rate 15 min, then the values on these registers (marked with \*) will get updated on every 15 min.
  - \*\*2. External Counter gets updated when Digital Input is configured in Pulse Mode.
  - 3. OVF stands for OverFlow.
  - 4. For 3P3W and 1P2W System, phase-wise parameters are not available.

## 3.2 Accessing 4 X register for Reading & Writing Settings:

Each setting is held in the 4X registers. ModBus code 03 is used to read the current setting & code 16 is used to write/change the setting. Refer **TABLE 3** for 4X Register addresses.

### Example: Reading System type

System type: Start address = 1772 (Hex)

Number of registers = 02

**Note: Number of registers = Number of Parameters x 2**

### Query :

Device Address	01 (Hex)
Function Code	03 (Hex)
Start Address High	17 (Hex)
Start Address Low	72 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
CRC Low	E4 (Hex)
CRC High	09 (Hex)

**Start Address High** : Most significant 8 bits of starting address of the parameter requested.

**Start Address Low** : Least significant 8 bits of starting address of the parameter requested.

**Number of register High** : Most significant 8 bits of Number of registers requested.

**Number of register Low** : Least significant 8 bits of Number of registers requested.

**(Note : Two consecutive 16 bit register represent one parameter.)**

### Response: System Type (3phase 4 wire = 3)

Device Address	01 (Hex)
Function Code	03 (Hex)
Byte Count	04 (Hex)
Data Register- 1 High Byte	40 (Hex)
Data Register- 1 Low Byte	40 (Hex)
Data Register- 2 High Byte	00 (Hex)
Data Register- 2 Low Byte	00 (Hex)
CRC Low	EE (Hex)
CRC High	27 (Hex)

**Byte Count** : Total number of data bytes received.

**Data register 1 High Byte** : Most significant 8 bits of Data register 1 of the parameter requested.

**Data register 1 Low Byte** : Least significant 8 bits of Data register 1 of the parameter requested.

**Data register 2 High Byte** : Most significant 8 bits of Data register 2 of the parameter requested.

**Data register 2 Low Byte** : Least significant 8 bits of Data register 2 of the parameter requested.

**(Note : Two consecutive 16 bit register represent one parameter.)**

### Example : Writing System type

System type : Start address = 1772 (Hex)

Number of registers = 02

Note: Number of registers = Number of Parameters x 2

Query:( Change System type to 3phase 3wire = 2 )

Device Address	01 (Hex)
Function Code	10 (Hex)
Starting Address High	17 (Hex)
Starting Address Low	72 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
Byte Count	04 (Hex)
Data Register- 1 High Byte	40 (Hex)
Data Register- 1 Low Byte	00 (Hex)
Data Register- 2 High Byte	00 (Hex)
Data Register- 2 Low Byte	00 (Hex)
CRC Low	66 (Hex)
CRC High	10 (Hex)

**Byte Count** : Total number of data bytes received.

**Data register 1 High Byte** : Most significant 8 bits of Data register 1 of the parameter requested.

**Data register 1 Low Byte** : Least significant 8 bits of Data register 1 of the parameter requested.

**Data register 2 High Byte** : Most significant 8 bits of Data register 2 of the parameter requested.

**Data register 2 Low Byte** : Least significant 8 bits of Data register 2 of the parameter requested.

**(Note : Two consecutive 16 bit register represent one parameter)**

### Response:

Device Address	01 (Hex)
Function Code	10 (Hex)
Start Address High	17 (Hex)
Start Address Low	72 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
CRC Low	61 (Hex)
CRC High	CA (Hex)

**Start Address High** : Most significant 8 bits of starting address of the parameter requested.

**Start Address Low** : Least significant 8 bits of starting address of the parameter requested.

**Number of register High** : Most significant 8 bits of Number of registers requested.

**Number of register Low** : Least significant 8 bits of Number of registers requested.

**(Note : Two consecutive 16 bit register represent one parameter)**

### 3.3 Accessing 4 X register for Long Energy Reading & Writing :

For setting Energy start count in long energy format following query format should be used for writing energy start count. First, send query (at address 1790) to unlock the parameter.

**Note: For parameter to be unlocked, refer TABLE 8 for energy parameter selection.**

#### Query: (Query for Unlock to enter System Active Energy Import)

Device Address	01 (Hex)
Function Code	10 (Hex)
Starting Address High	17 (Hex)
Starting Address Low	90 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
Byte Count	04 (Hex)
Data Register- 1 High Byte	3F (Hex)
Data Register- 1 Low Byte	80 (Hex)
Data Register- 2 High Byte	00 (Hex)
Data Register- 2 Low Byte	00 (Hex)
CRC Low	66 (Hex)
CRC High	10 (Hex)

**Byte Count** : Total number of data bytes transmitted.

**Data register 1 High Byte** : Most significant 8 bits of Data register 1 of the parameter requested.

**Data register 1 Low Byte** : Least significant 8 bits of Data register 1 of the parameter requested.

**Data register 2 High Byte** : Most significant 8 bits of Data register 2 of the parameter requested.

**Data register 2 Low Byte** : Least significant 8 bits of Data register 2 of the parameter requested.

**(Note : Two consecutive 16 bit register represent one parameter.)**

#### Response:

Device Address	01 (Hex)
Function Code	10 (Hex)
Start Address High	17 (Hex)
Start Address Low	90 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
CRC Low	61 (Hex)
CRC High	CA (Hex)

**Start Address High** : Most significant 8 bits of starting address of the parameter requested.

**Start Address Low** : Least significant 8 bits of starting address of the parameter requested.

**Number of register High** : Most significant 8 bits of Number of registers requested.

**Number of register Low** : Least significant 8 bits of Number of registers requested.

Once the Unlock query is sent, next send query for writing Energy start count.  
 For Example: Query for writing energy start count of 999999999 for System Active Import Energy

**Note:** Refer **TABLE 2** for register address of the selected parameter.

**Query: (Query enter System Active Energy Import)**

Device Address	01 (Hex)
Function Code	10 (Hex)
Starting Address High	03 (Hex)
Starting Address Low	20 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
Byte Count	04 (Hex)
Data Register- 1 High Byte	3B (Hex)
Data Register- 1 Low Byte	9A (Hex)
Data Register- 2 High Byte	C9 (Hex)
Data Register- 2 Low Byte	FF (Hex)
CRC Low	66 (Hex)
CRC High	10 (Hex)

**Byte Count :** Total number of data bytes received.

**Data register 1 High Byte :** Most significant 8 bits of Data register 1 of the parameter requested.

**Data register 1 Low Byte :** Least significant 8 bits of Data register 1 of the parameter requested.

**Data register 2 High Byte :** Most significant 8 bits of Data register 2 of the parameter requested.

**Data register 2 Low Byte :** Least significant 8 bits of Data register 2 of the parameter requested.

**(Note : Two consecutive 16 bit register represent one parameter.)**

**Value( 3B ,9A, C9,FF ) represents 999999999.**

**Response:**

Device Address	01 (Hex)
Function Code	10 (Hex)
Start Address High	03 (Hex)
Start Address Low	20 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
CRC Low	61 (Hex)
CRC High	CA (Hex)

**Start Address High :** Most significant 8 bits of starting address of the parameter requested.

**Start Address Low :** Least significant 8 bits of starting address of the parameter requested.

**Number of register High :** Most significant 8 bits of Number of registers requested.

**Number of register Low :** Least significant 8 bits of Number of registers requested.

**(Note : Two consecutive 16 bit register represent one parameter.)**

**TABLE 3 : 4 X register addresses**

Address (Register)	Parameter No.	Parameter	Read/ Write	Modbus Start Addr. Hex		Default Value
				High Byte	Low Byte	
46003	1	System Type	R/Wp	17	72	3
46005	2	PT Primary	R/Wp	17	74	500
46007	3	CT Primary	R/Wp	17	76	5
46009	4	PT Secondary	R/Wp	17	78	500
46011	5	CT Secondary	R/Wp	17	7A	5
46013	6	System Frequency Selection	R/Wp	17	7C	50
46019	9	Demand Integration Time	R/Wp	17	82	8
46021	10	Energy Unit	R/Wp	17	84	2
46023	11	Energy Digit Reset Count	R/Wp	17	86	8
46027	13	Energy Update rate on MODBUS	R/Wp	17	8A	15
46029	14	Impulse on Energy Selection	R/Wp	17	8C	1
46031	15	Impulse Rate	R	17	8E	-
46033	16	Energy Para Select for Start Count	R/Wp	17	90	0
46035	17	Enter Energy Start Count	R/Wp	17	92	0
46037	18	Reset Parameters	R/Wp	17	94	0
46039	19	Password	R/Wp	17	96	0
46041	20	Factory Reset Mode	R/Wp	17	98	0
46045	22	Number of Poles	R/Wp	17	9C	2
46047	23	Auto Scroll	R/Wp	17	9E	0
46049	24	Current Noise Cutoff (mA)	R/Wp	17	A0	0
46051	25	Node Address	R/Wp	17	A2	1
46053	26	RS485 Setup Code	R/Wp	17	A4	4
46055	27	Register Order/Word Order	R/Wp	17	A6	0
46057	28	Pulse Width	R/Wp	17	A8	100
46059	29	Pulse Divisor	R/Wp	17	AA	1
46061	30	Relay1 Output Select	R/Wp	17	AC	0
46063	31	Relay1 Parameter Select	R/Wp	17	AE	0
46065	32	Relay1 Limit1 Alarm Setting (Hi/Lo)	R/Wp	17	B0	0
46067	33	Relay1 Limit1 Trip point	R/Wp	17	B2	10
46069	34	Relay1 Limit1 Hysteresis	R/Wp	17	B4	0.5

**TABLE 3 Continued...**

Address (Register)	Parameter No.	Parameter	Read/ Write	Modbus Start Addr. Hex		Default Value
				High Byte	Low Byte	
46071	35	Relay1 Limit 2 Para select	R/Wp	17	B6	0
46073	36	Relay1 Limit 2 Alarm Setting (High/Low)	R/Wp	17	B8	0
46075	37	Relay1 Limit 2 Trip point	R/Wp	17	BA	10
46077	38	Relay1 Limit 2 Hysteresis	R/Wp	17	BC	0.5

**NOTE:** Wp - Write protected , R - Read only , R/Wp - Read & Write protected

### Explanation for 4 X register :

**NOTE:** Writing any invalid values (non-applicable values) to any of the following locations will result in modbus error.

Address	Parameter	Description
46003	System Type	This address is used to set the System type. Write one of the following value to this address. <b>1</b> : 1 Phase 2 Wire <b>3</b> : 3 Phase 3 Wire <b>3</b> : 3 Phase 4 Wire.
46005	PT Primary	This address allows the user to set PT Primary value (in terms of VL-L). The settable range is <b>100 VL-L</b> to <b>1200 kVL-L</b> for all system types & also depends on the per phase 1800MVA Restriction of power combined with CT primary.
46007	CT Primary	This address allows the user to set CT Primary value. The settable range is <b>1</b> to <b>9999</b> . It also depends on the per phase 1800 MVA Restriction of power combined with PT primary.
46009	PT Secondary	This address is used to read and write the PT secondary value. The settable range is <b>100-600VLL</b> .
46011	CT Secondary	This address is used to read and write the CT secondary value. Write one of the following values to this address. <b>1</b> : 1A CT secondary <b>5</b> : 5A CT secondary
46013	System Frequency Selection	This address is used to set the frequency of the input. Write <b>50</b> : For 50 Hz input <b>60</b> : For 60Hz input
46019	Demand Integration Time	Demand period represents demand time in minutes. The applicable values are ranging from <b>5</b> to <b>60</b> .
46021	Energy Unit	This address is used to set energy output in Wh,kWh & MWh. Write one of the following value to this address. <b>1</b> : Energy in Wh. <b>2</b> : Energy in KWh. <b>3</b> : Energy in MWh.
46023	Energy Digit Reset Count	This address is used to set maximum energy count after which energy on modbus will roll over to zero. Valid values are <b>7</b> , <b>8</b> and <b>9</b> .
46027	Energy Update Rate	This address is used to specify update rate of energy in corresponding 3X registers. The valid values for update rate are from <b>1</b> to <b>60</b> min.

Address	Parameter	Description
46029	Impulse on Energy Selection	This address is used to select the energy to which impulse is to be assigned. Writing any other value will return an error. To assign the value refer <b>TABLE 5</b> .
46031	Impulse Rate	This address allows the user to read the impulse rate which is calculated depending on the nominal system power.
46033	Energy Para Select for Start Count	This address is used to select the parameter whose start count (initial value) is to be set. Refer <b>TABLE 8</b> .
46035	Enter Energy Start Count	This address is used to set the start count of the parameter selected in address 46033. The start count of the parameter should be in the range specified in <b>TABLE 8</b> .
46037	Reset Parameters	This address is used to reset different parameters. Write specific value to this register to reset the corresponding parameter. Following are the values to reset various data. <b>1:</b> Energy Reset <b>2:</b> Demand Reset <b>3:</b> System Min Values Reset <b>4:</b> System Max Values Reset <b>5:</b> Run hour & On hour Reset <b>6:</b> No of Interruptions Reset <b>7:</b> Reset All data <b>8:</b> Tariff log Reset <b>9:</b> DI External Energy Reset <b>10:</b> Time Log Reset <b>11:</b> Load Profile Log Reset
46039	Password	This address is used to set & reset the password. Valid Range of Password can be set is <b>0000 - 9999</b> . 1) If password lock is present & if this location is read it will return <b>zero</b> . 2) If password lock is absent & if this location is read it will return <b>one</b> . 3) If password lock is present & to disable this lock first send valid password to this location then write " <b>0000</b> " to this location 4) If password lock is present & to modify 4X parameter first send valid password to this location so that 4X parameter will be accessible for modification. 5) If for in any of the above case invalid password is send then meter will return exceptional error 2.
46041	Factory Reset	This address allows the user to reset the instrument to factory settings. Refer the <b>Default Values</b> in <b>TABLE 3</b> for factory settings. Write <b>5555</b> at this address to reset the instrument.
46045	Number of Poles	This address is used to set the no. of poles of generator of which RPM is to be measured. The value must be between <b>2 to 40</b> and a multiple of 2.

Address	Parameter	Description
46047	Auto scroll	This address is used to activate or de-activate the auto scrolling. Write <b>0</b> : Deactivate <b>1</b> : Activate
46049	Current Noise Cut-off (mA)	This address is used to set the noise current cutoff. The valid values ranges from <b>0 to 30</b> (mA).
46051	Node Address	This register address is used to set Device address between <b>1 to 247</b> .
46053	RS485 Set-up Code	This address is used to set the baud rate, Parity and Number of stop bits. Refer to <b>TABLE 4</b> for details.
46055	Word Order	Word Order controls the order in which Multifunction Meter receives or sends floating - point numbers:- normal or reversed register order. In normal mode, the two registers that make up a floating point numbers are sent most significant bytes first. In reversed register mode, the two registers that make up a floating point numbers are sent least significant bytes first. To set the mode, write the value '2141.0' into this register-the instrument will detect the order used to send this value and set that order for all ModBus transaction involving floating point numbers.
46057	Pulse Width of Relay	This address is used to set pulse width of the Pulse output. Write one of the following values to this address: <b>60</b> : 60 ms <b>100</b> : 100 ms <b>200</b> : 200 ms
46059	Pulse Divisor	This address is used to set pulse divisor of the Pulse output. Write one of the following values to this address for energy unit <b>Wh</b> : <b>1</b> : Divisor 1 <b>10</b> : Divisor 10 <b>100</b> : Divisor 100 <b>1000</b> : Divisor 1000 In energy unit <b>kWh</b> or <b>MWh</b> , divisor will be <b>1</b> by default.
46061	Relay 1 Output Select	This address is used to select the Relay operation as None / Pulse / Limit / Timer / Health Monitor / Pre Paid Energy. Write one of the following values to this address. <b>0</b> : None <b>1</b> : Pulse <b>2</b> : Limit <b>3</b> : Timer <b>4</b> : Health Monitor <b>5</b> : Pre Paid Energy <b>6</b> : RTC
46063	Relay 1 Parameter Select	This address is used to assign the Parameter to Relay. Pulse relay : Refer <b>TABLE 9</b> . Limit - 1 relay : Refer <b>TABLE 10</b> . Timer relay : Refer <b>TABLE 6</b> . RTC Relay: Refer <b>TABLE 7</b>
46065	Relay 1 Limit - 1 Alarm Setting	This address is used to set the alarm for the selected Limit -1 parameter <b>0</b> : High Alarm <b>1</b> : Low Alarm

Address	Parameter	Description
46067	Relay 1 Limit - 1 Trip Point	This address is used to set the trip point in %. Any value between <b>10 to 100</b> for Lo- alarm & <b>10 to120</b> for Hi-alarm can be written to this address. For energy parameters, the valid range is <b>10-9999999</b> . (refer <b>TABLE 10</b> ).
46069	Relay 1 Limit - 1 Hysteresis	This address is used to set the hysteresis between <b>0.5% to 50.0%</b> .
46071	Relay 1 Limit - 2 Para Select	This address is used to assign the parameter for Limit 2 (refer <b>TABLE 10</b> ) to Relay 1.
46073	Relay 1 Limit - 2 Alarm Setting	Same as Relay 1 Limit - 1
46075	Relay 1 Limit - 2 Trip Point	
46077	Relay 1 Limit - 2 Hysteresis	
46079	Relay 1 Limit - 3 Para Select	
46081	Relay 1 Limit - 3 Alarm Setting	Same as Relay 1 Limit - 1
46083	Relay 1 Limit - 3 Trip Point	
46085	Relay 1 Limit - 3 Hysteresis	
46087	Relay 1 Logic Operation Setting	
46089	Relay 1 Configuration Select	This address is used to set the Configuration for Relay 1. Valid values are : <b>0</b> : Energize <b>1</b> : De-Energize
46091	Relay 1 Delay (On)	This address is used to set the On delay in seconds in range of <b>1 to 9999</b> for Limit and Timer Relay

Address	Parameter	Description
46093	Relay 1 Delay (Off)	This address is used to set the Off delay in seconds in range of <b>1 to 9999</b> for Limit and Timer Relay
46095	Relay 1 Energy Selection for Pre Paid	This register address is used to assign the Parameter to Pre Paid Energy Relay. Refer <b>TABLE 9</b> for details.
46097	Relay 1 Rate per Energy Unit for Prepaid	This register address is used to assign unit (1 kilo) cost for the energy parameter in the range of <b>1 to 999</b> .
46099	Relay 1 Topup Recharge for Prepaid	This register address is used to assign topup recharge for the energy parameter in the range of <b>1 to 999999</b> when energy unit is set as "2" or "3" and <b>1 to 9999</b> when energy unit is set as "1".
46101	Relay 1 New Recharge for Prepaid	This register address is used to assign new recharge for the energy parameter in the range of <b>1 to 999999</b> when energy unit is set as "2" or "3" and <b>1 to 9999</b> when energy unit is set as "1".
46103	Relay 2 Output Select	Same as Relay - 1
46105	Relay 2 Parameter Select	
46107	Relay 2 Limit - 1 Alarm Setting	
46109	Relay 2 Limit - 1 Trip Point	
46111	Relay 2 Limit - 1 Hysteresis	
46113	Relay 2 Limit - 2 Para Select	
46115	Relay 2 Limit - 2 Alarm Setting	
46117	Relay 2 Limit - 2 Trip Point	

Address	Parameter	Description
46119	Relay 2 Limit - 2 Hysteresis	Same as Relay - 1
46121	Relay 2 Limit - 3 Para Select	
46123	Relay 2 Limit - 3 Alarm Setting	
46125	Relay 2 Limit - 3 Trip Point	
46127	Relay 2 Limit - 3 Hysteresis	
46129	Relay 2 Logic Operation Setting	
46131	Relay 2 Configuration Select	
46133	Relay 2 Delay (On)	
46135	Relay 2 Delay (Off)	
46137	Relay 2 Energy Selection for Pre Paid	
46139	Relay 2 Rate per Energy Unit for Prepaid	
46141	Relay 2 Topup Recharge for Prepaid	
46143	Relay 2 New Recharge for Prepaid	

Address	Parameter	Description
46229	Health Monitor Voltage Unbalance limit	This address is used to set the limit of voltage unbalance. Valid range is <b>5% to 20%</b> .
46231	Health Monitor Current Unbalance limit	This address is used to set the limit of current unbalance. Valid range is <b>5% to 20%</b> and to disable it, set <b>0</b> .
46233	Health Monitor Under Frequency Limit	This address is used to set the under frequency limit. Valid range is <b>95% to 99%</b> of system frequency and to disable it, set <b>0</b> .
46235	Health Monitor Under Voltage Limit	This address is used to set the under voltage limit. Valid range is <b>70% to 90%</b> of nominal and to disable it, set <b>0</b> .
46237	Health Monitor Over Voltage Limit	This address is used to set the over voltage limit. Valid range is <b>105% to 120%</b> of nominal and to disable it, set <b>0</b> .
46239	Health Monitor Over Current Limit	This address is used to set the over current limit. Valid range is <b>50% to 120%</b> of nominal and to disable it, set <b>0</b> .
46241	Relay Timer 1 Start / Stop	This address is used to start/stop the timer for Relay 1 in timer mode with following options: <b>0</b> : Stop <b>1</b> : Start
46243	Relay Timer 2 Start / Stop	This address is used to start/stop the timer for Relay 2 in timer mode with following options: <b>0</b> : Stop <b>1</b> : Start
46337	Digital Input De-bounce Time	This address is used to set the De-bounce time of Digital Input. Valid range is <b>1 to 9999</b> .
46339	Digital Input 1 Mode	This address is used to select mode of Digital Input 1. Write one of the following values to this address. <b>0</b> : Status <b>1</b> : Tariff* <b>2</b> : Pulse <b>*Note</b> : Refer <b>TABLE 12</b> for relationship between Digital Input and Tariff.
46341	Digital Input 2 Mode	This address is used to select mode of Digital Input 2. Write one of the following values to this address. <b>0</b> : Status <b>1</b> : Tariff* <b>2</b> : Pulse <b>*Note</b> : Refer <b>TABLE 12</b> for relationship between Digital Input and Tariff.

Address	Parameter	Description
46343	Digital Input 3 Mode	This address is used to select mode of Digital Input 3. Write one of the following values to this address. 0: Status      1: Tariff*      2: Pulse <b>*Note</b> : Refer <b>TABLE 12</b> for relationship between Digital Input and Tariff.
46345	Digital Input 4 Mode	This address is used to select mode of Digital Input 4. Write one of the following values to this address. 0: Status      2: Pulse
46347	Digital Input 1 Pulse Multiplier	This address is used to set the pulse multiplier of Digital Input 1 between <b>1 to 9999</b> . This parameter is useful when DI is configured in Pulse Mode. The Pulse count is available as "External Counter" on modbus (refer <b>TABLE 2</b> ).
46349	Digital Input 2 Pulse Multiplier	This address is used to set the pulse multiplier of Digital Input 2 between <b>1 to 9999</b> . This parameter is useful when DI is configured in Pulse Mode. The Pulse count is available as "External Counter" on modbus (refer <b>TABLE 2</b> ).
46351	Digital Input 3 Pulse Multiplier	This address is used to set the pulse multiplier of Digital Input 3 between <b>1 to 9999</b> . This parameter is useful when DI is configured in Pulse Mode. The Pulse count is available as "External Counter" on modbus (refer <b>TABLE 2</b> ).
46353	Digital Input 4 Pulse Multiplier	This address is used to set the pulse multiplier of Digital Input 4 between <b>1 to 9999</b> . This parameter is useful when DI is configured in Pulse Mode. The Pulse count is available as "External Counter" on modbus (refer <b>TABLE 2</b> ).
46357	Firmware Version	This address is read only and displays the firmware version of the meter.
46365	Backlite ON/OFF	This address is used to Turn ON or Turn OFF the backlit. Valid values are: 1: Backlit On    0: Backlit Off
46367	Contrast	This address is used to change the contrast of the display. The options available are <b>1 to 4</b> , in increasing order of contrast.
46369	User Assignable Screen Enable	This address is used to activate or deactivate the User Assignable Screen feature which enables the user to select the screens to be displayed over the screen. 0: Disable <b>1 to 10</b> : Corresponding number of user assignable screens.
46371 to 46389	User Screens 1 to 10	These addresses are used to assign maximum 10 selectable screen numbers in corresponding sequence. User needs to put the combination of key number and screen number to this address. Refer <b>TABLE 13</b> for screen numbers. For example, to select the screen number 3 of <b>V/A key</b> (key number 1), assign 103 to the corresponding user screen. Similarly, <b>P key</b> and <b>Sys key</b> have key numbers 2 and 3, respectively.

Address	Parameter	Description
46391	Tariff Selection Mode	This address is used to select the mode of Tariff. Valid values are: <b>0:</b> Digital Input (This value is valid only when Digital Input 1 Mode is set as Tariff) <b>1:</b> Modbus Command When DI1 is selected in Tariff Mode, then no input present on DI1 indicates Tariff 1 and an input present on DI1 indicates Tariff 2.
46393	Number of Tariff	This address is used to select the number of Tariff. Valid values are: <b>1:</b> Single Tariff <b>2:</b> Dual Tariff <b>3:</b> 3 Tariff <b>4:</b> 4 Tariff <b>5:</b> 5 Tariff <b>6:</b> 6 Tariff <b>7:</b> 7 Tariff <b>8:</b> 8 Tariff Refer <b>TABLE 12</b> for relationship between Digital Input and Tariff.
46395 to 46405	Tariff Energy Source 1 to 6	These addresses are used to assign the energy parameters to six tariff sources. Refer <b>TABLE 9</b> for the energy parameters numbers.
46407	Active Tariff	This address is used to select active tariff, only when Tariff selection mode is set as "Modbus Command". Write one of the following values to this address. <b>1:</b> 1st Tariff <b>2:</b> 2nd Tariff <b>3:</b> 3rd Tariff <b>4:</b> 4th Tariff <b>5:</b> 5th Tariff <b>6:</b> 6th Tariff <b>7:</b> 7th Tariff <b>8:</b> 8th Tariff
46409 to 46423	Tariff 1 to 8 Start Time	This address is used to read and write the start time upto 8 tariff when tariff selection mode is RTC. The settable range is 0 to 235959, i.e. HHMMSS format.
46425	RTC Complete Date	This address is used to read and write full date in "ddmmyy" format from RTC.
46427	RTC Complete Time	This address is used to read and write complete time in "hh.mm.ss" format from RTC.
46431	Event Based Datalog Select	This register is used to enable or disable event based datalogging. <b>0:</b> Disabled <b>1:</b> Enabled
46433	Time Based Datalog Select	This register is used to enable or disable time based datalogging. <b>0:</b> Disabled <b>1:</b> Enabled
46435	Time Based Datalog Interval Selection	This address is used to read and write the interval between consecutive time log entries in minutes. Valid value range 1-60
46437	Logging Parameter Count	This value decides the number of parameters to be logged in time based datalogging. The value ranges from <b>1 to 30</b> .

Address	Parameter	Description
46439-46497	Datalog Parameter 1 to 30	These addresses are used to read and write the parameters to be logged in time based logging. For valid values, refer <b>TABLE 17</b> .
46499	Load Profile Datalog Select	The address is used to start/stop Load Profile Datalogging. <b>1</b> : Start Load Profile datalogging <b>0</b> : Stop Load Profile datalogging
46501	Start Date of Load Profile Datalog	This value show the starting date for Load Profile datalog. This address are read only.
46701	IP Address 1	This address is read only and represents the high 16 bits of IP address.
46703	IP Address 2	This address is read only and represents the low 16 bits of IP address.
46705	Subnet Mask 1	This address is read only and represents high 16 bits of subnet mask address.
46707	Subnet Mask 2	This address is read only and represents low 16 bits of subnet mask address.
46709	Default gateway 1	This address is read only and represents high 16 bits of default gateway address
46711	Default gateway 2	This address is read only and represents low16 bits of default gateway address.
46713	Server Port	This address is read only and represents server port.

**TABLE 5 : Impulse Energy Selection**

Parameter Number	Parameter	3P4W	3P3W	1P2W
0	None	✓	✓	✓
1	System Active Energy	✓	✓	✓
2	System Reactive Energy	✓	✓	✓
3	System Apparant Energy	✓	✓	✓
4	Active Energy L1	✓	✗	✗
5	Active Energy L2	✓	✗	✗
6	Active Energy L3	✓	✗	✗
7	Apparant Energy L1	✓	✗	✗
8	Apparant Energy L2	✓	✗	✗
9	Apparant Energy L3	✓	✗	✗
10	Reactive Energy L1	✓	✗	✗
11	Reactive Energy L2	✓	✗	✗
12	Reactive Energy L3	✓	✗	✗

**TABLE 6 : Number of Cycles for Timer Relay**

Code	Description
0	Unlimited
1 to 9999	Fixed Cycles

**TABLE 7: Weekly Repeat for RTC Relay**

Code	Description
1XXXXXXXX E{1,2,3,4,5,6,7}	Eg 11010000 means relay will operate only on Sun & Tue.' E' bit indicate Enable/Disable
	1 = Sunday, 7 = Saturday

**TABLE 8 : Energy Parameter Selection and Start Count**

<b>Parameter Number</b>	<b>Parameter</b>	<b>Range</b>
1	Sys Active Energy Import	1 to 999999999
2	Sys Active Energy Export	1 to 999999999
3	Sys Reactive Energy Cap.	1 to 999999999
4	Sys Reactive Energy Ind.	1 to 999999999
5	Sys Apparent Energy	1 to 999999999
7	Sys Active Energy Import Overflow Count	1 to 999999
8	Sys Active Energy Export Overflow Count	1 to 999999
9	Sys Reactive Energy Capacitive Overflow Count	1 to 999999
10	Sys Reactive Energy Inductive Overflow Count	1 to 999999
11	Sys Apparent Energy Overflow Count	1 to 999999
25	Sys Total Active Energy	1 to 999999999
26	Sys Total Reactive Energy	1 to 999999999
27	Sys Total Apparent Energy	1 to 999999999
28	Sys Total Active Energy Overflow Count	1 to 999999
29	Sys Total Reactive Energy Overflow Count	1 to 999999
30	Sys Total Apparent Energy Overflow Count	1 to 999999
37	Active Energy Import L1	1 to 999999999
38	Active Energy Import L2	1 to 999999999
39	Active Energy Import L3	1 to 999999999
40	Active Energy Export L1	1 to 999999999
41	Active Energy Export L2	1 to 999999999

232	Total Reactive Energy L3	✓	✗	✗	10-9999999	Nom <sup>(3)</sup>

- Note :** (1) Parameters 1,2,3 are L-N Voltage for 3P 4W & L-L Voltage for 3P 3W.  
 (2) For Frequency 0% corresponds to 45 Hz and 100% corresponds to 66 Hz.  
 (3) For 3P 4W and 1P2W the nominal value is VLN and that for 3P 3W is VLL.  
 (4) Nominal Value for power is calculated from Nominal Voltage and Current values.

Nominal Value is to be considered with set CT/ PT Primary values.  
 For 1P2W, L1 Phase values are to be considered as System values.  
 Trip Point for Energy Parameters is a whole (non-decimal) number.

**TABLE 11 : Health Monitor Status for 3 Phase System**

bit15	bit14	bit13	bit12	bit11	bit10	bit9	bit8	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0
XX	XX	XX	XX	XX	XX	XX	XX	OC	OV	UV	UF	PF	PH-R	IUNB	VUNB
0	0	0	0	0	0	0	0	1	0	0	0	0	0	0	0

For e.g. :

- Health Status is valid for Three Phase system only
- bit15, bit14, bit13, bit12, bit11, bit10, bit9 and bit8 will always be 00000000.
- The fault parameter bit will be 1.
- If only over current fault is present, then OC bit will 1.
- Binary value of OC is 0000000010000000 and decimal value is 128.
- This value will be shown in health status indication buffer (refer **TABLE 1.6**) at corresponding address.

**OC** : Over current; **OV** : Over voltage; **UV** : Under voltage; **UF** : Under frequency; **PF** : Phase failure **PH-R** : Phase reversal; **IUNB** : Current Unbalance; **VUNB** : Voltage Unbalance

### 3.4 User Assignable Modbus Registers:

The Multifunction Instrument contains 20 user assignable registers in the address range of 0x1450 (35201) to 0x1476 (35239) for 3X registers (see TABLE 14) and address range of 0x1450 (45201) to 0x1476 (45239) for 4X registers (see TABLE 14).

Any of the parameter addresses (3X register addresses and 4X register addresses of TABLE 1) accessible in the instrument can be mapped to these 20 user assignable registers.

Parameters (3X and 4X registers addresses) that reside in different locations may be accessed by the single request by re-mapping them to adjacent address in the user assignable registers area.

The actual address of the parameters (3X and 4X registers addresses) which are to be accessed via address 0x1450 to 0x1476 are specified in 4X Register 0x2710 to 0x2723 (see TABLE 15).

**TABLE 14 : User Assignable 3X Data Registers**

Address (3X)	Address (4X)	Assignable Register	Modbus Start Address (Hex)	
			High Byte	Low Byte
35201	45201	Assignable Register 1	14	50
35203	45203	Assignable Register 2	14	52
35205	45205	Assignable Register 3	14	54
35207	45207	Assignable Register 4	14	56

35221	45221	Assignable Register 11	14	64
35223	45223	Assignable Register 12	14	66
35225	45225	Assignable Register 13	14	68
35227	45227	Assignable Register 14	14	6A
35229	45229	Assignable Register 15	14	6C
35231	45231	Assignable Register 16	14	6E
35233	45233	Assignable Register 17	14	70
35235	45235	Assignable Register 18	14	72
35237	45237	Assignable Register 19	14	74
35239	45239	Assignable Register 20	14	76

**TABLE 15 : User Assignable mapping register ( 4X registers)**

Address (4X)	Assignable Register	Modbus Start Address (Hex)	
		High Byte	Low Byte
410001	Map Address for Assignable Register 1	27	10
410002	Map Address for Assignable Register 2	27	11
410003	Map Address for Assignable Register 3	27	12
410004	Map Address for Assignable Register 4	27	13
410005	Map Address for Assignable Register 5	27	14
410006	Map Address for Assignable Register 6	27	15
410007	Map Address for Assignable Register 7	27	16
410008	Map Address for Assignable Register 8	27	17
410009	Map Address for Assignable Register 9	27	18
410010	Map Address for Assignable Register 10	27	19
410011	Map Address for Assignable Register 11	27	1A
410012	Map Address for Assignable Register 12	27	1B
410013	Map Address for Assignable Register 13	27	1C
410014	Map Address for Assignable Register 14	27	1D
410015	Map Address for Assignable Register 15	27	1E
410016	Map Address for Assignable Register 16	27	1F
410017	Map Address for Assignable Register 17	27	20
410018	Map Address for Assignable Register 18	27	21
410019	Map Address for Assignable Register 19	27	22
410020	Map Address for Assignable Register 20	27	23

### Assigning parameter to User Assignable Registers:

To access the Voltage2 (3X address 0x0002) and Power Factor1 (3X address 0x001E) through user assignable register assign these addresses to 4x register (TABLE 15) 0x2710 and 0x2711 respectively.

### Assigning Query:

Device Address	01 (Hex)
Function Code	10 (Hex)
Start Address High	27 (Hex)
Start Address Low	10 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
Byte Count	04 (Hex)
Data Register- 1 High Byte	00 (Hex)
Data Register- 1 Low Byte	02 (Hex)
Data Register- 2 High Byte	00 (Hex)
Data Register- 2 Low Byte	1E (Hex)
CRC Low	01 (Hex)
CRC High	EC (Hex)

} Voltage  
2 \* (3X Address 0x0002)  
} Power Factor  
1 \* (3X Address 0x001E)

### Response:

Device Address	01 (Hex)
Function Code	10 (Hex)
Start Address High	27 (Hex)
Start Address Low	10 (Hex)
Number of Registers High	00 (Hex)
Number of Registers Low	02 (Hex)
CRC Low	4A (Hex)
CRC High	B9 (Hex)

\* Note : Upto 6 parameters can be assigned at a time but these parameters should be assigned in Multiple of two i.e. 2, 4 or 6.

### Reading Parameter data through User Assignable Registers:

In assigning query, Voltage 2 & Power Factor 1 parameters were assigned to 0x2710 & 0x2711 (**TABLE 15**) which will point to user assignable 3x registers 0x1450 and 0x1452 (**TABLE 14**). So to read Voltage2 and Power Factor1 data reading query should be as below.

#### Query:

Device Address	01 (Hex)
Function Code	04 (Hex)
Start Address High	14 (Hex)
Start Address Low	50 (Hex)
Number of Registers Hi	00 (Hex)
Number of Registers Lo	04 (Hex)
CRC Low	F0 (Hex)
CRC High	71 (Hex)

**Start Address High** : Most significant 8 bits of starting address of Userassignable register.

**Start Address low** :Least significant 8 bits of starting address of User assignable register.

**Number of register Hi** : Most significant 8 bits of Number of registers requested.

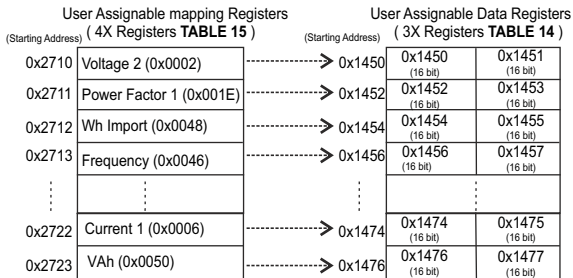

**Number of register Lo** : Least significant 8 bits of Number of registers requested.

**\*Note: Two consecutive 16 bit register represent one parameter. Since two parameters are requested four registers are required**

#### Response: (Volt2 = 219.30 / Power Factor1 = 1.0)

Device Address	01 (Hex)
Function Code	04 (Hex)
Byte Count	08 (Hex)
Data Register- 1 High Byte	43 (Hex)
Data Register- 1 Low Byte	5B (Hex)
Data Register- 2 High Byte	4E (Hex)
Data Register- 2 Low Byte	04 (Hex)
Data Register- 3 High Byte	3F (Hex)
Data Register- 3 Low Byte	80 (Hex)
Data Register- 4 High Byte	00 (Hex)
Data Register- 4 Low Byte	00 (Hex)
CRC Low	79 (Hex)
CRC High	3F (Hex)

2 Data } Voltage  
Power Factor 1 Data }

**To get the data through User Assignable Register go through the following steps:**

- 1) Assign starting addresses (**TABLE 1**) of parameters of interest to "User assignable mapping registers" in a sequence in which they are to be accessed (see Section "**Assigning Parameter to User Assignable Registers**" of Section 3.4).
- 2) Once the parameters are mapped, data can be acquired by using "User assignable data register" Starting address. i.e to access data of Voltage2, Power factor1,Wh import, Frequency send query with starting address 0x1450 with number of register 8 or individually parameters can be accessed. For example, if current1 is to be accessed use starting address 0x01474. (see Section **Reading Parameter data through User Assignable Registers** of Section 3.4).

## 4. Datalogging

Datalogging is a feature that allows the meter to store measured parameters based on time or on occurrence of a certain event. The user can retrieve the data later for further application.

This meter offers three types of datalogging

1) Event based

2) Time based

3) Load profile

### 4.1 Event Based Datalogging

This type of datalogging stores data when certain event is observed. This data is time stamped and last five occurrences of each type of event are stored based on first in first out queue. This meter offers event based logging for 10 parameters. This data can be observed on the modbus on the address table shown below. These registers can be accessed by the query explained in section 3.1 The user can turn this logging on and off through display as well as modbus by using address 46431.

Changing any setup parameter related to the logged parameters will reset the log.

Note: Below addresses are available for 3X and for 4X.

for example 312289 for 3X and 412289 for 4X.

**TABLE 16: Addresses for event based datalog**

Address	Logged Parameter	Log Details	Mod Start Address Hex		Address	Logged Parameter	Log Details	Mod Start Address Hex

## 4.2 Time Based Datalogging

This type of datalogging stores data with a timestamp at a preset time interval. This can be used to take a snapshot of the system at regular time intervals. This data can be used to do in-depth analysis of the system. The number of parameters to be logged and which parameters to store can also be configured by the user through display as well as modbus. Various configuration registers can be found on addresses 46433 to 46497.

The number of entries stored varies according to the number of parameters logged i.e. more entries can be stored if less number of parameters are being logged. User can configure the meter to store 1 to 30 parameters. And the time interval can vary from 1 to 60 minutes. Editing of these parameters is not allowed while the logging is on.

Each entry consists of number of parameters selected by the user in addition to date and time of the entry log.

Max Memory Locations = 273030

Actual parameter stored in Each log = Date +time+Number of parameter selected by user

for ex. Number of parameter selected by user = 1.

Actual parameter stored in Each log = 1(Date) +1(time)+ 1 = 3

Maximum log that can be stored = Max Memory Location/Actual parameter stored in Each log  
 $= 273030/3 = 91010$

Timelog Interval setting = 15 minutes

Log in one day = (60 /Timelog Interval setting) \* 24  
 $= (60/15)*24 = 96$

Max Days = Maximum log that can be stored / log in one day  
 $= 91010 / 96 = 948.20$  days

After all memory allocated locations are filled with logging data, the meter will start shifting data by first in first out queue i.e. at any time after all the locations are used once, the user will have access to the latest logged maximum number of entries.

### Query Format for Downloading the Time based datalog

The query format for downloading an entry of a time datalog is given below. Maximum number of register the user can access in 1 query are limited by 64 and corresponding to it maximum byte count is 128. The byte count should be logging parameter count multiplied by 4 and added to 8, where 8 is the byte count for date and time (4 bytes x 2 parameters).

$(\text{logging parameter count} \times 4) + (2 \times 4)$

e.g.

if logging parameter count is 10

$\text{byte count} = (10 \times 4) + 8 = 48$  (4 bytes per parameter)

$\text{number of registers} = (10 \times 2) + (2 \times 2) = 24$  (2 registers per parameter)

Starting address will be 01,CA for time datalog.

The entry number of the desired log need to be converted to IEEE format and sent as 4 bytes.

#### Query example:

Description	Decimal Value	Hex Value
Dev Addr	3	03
Func Code	16	10
Start Addr Hi		01
Start Addr Lo		CA
No of Reg Hi	00	00
No of Reg Lo	14	0E
Log Download Bytes	28	1C
Entry No Reg 1 Hi	25	41
Entry No Reg 1 Lo		C8
Entry No Reg 2 Hi		00
Entry No Reg 2 Lo		00
CRC Lo		CC
CRC Hi		A4

If a user wants to download 5 parameters logged at entry number 25, the query will be as following (Assuming device address 3). All the data in query is represented in hexadecimal float.

03,10,01,CA,00,0E,1C,41,C8,00,00,CC,A4

03 is device address;

10 is function code;

01 CA is the address that lets the user access the time datalog;

00 0E is number of registers to be accessed (actual parameter count x 2 + 4);

1C is number of bytes to be accessed;

41 C8 00 00 is entry number converted to hex;

CCA4 is CRC calculated on query.

**Response:**

Description	Hex Value	Decimal Value
Dev Addr	03	03
Func Code	10	16
No of bytes	1C	28
Date	46,24,28,00	010506(May 1st 2006)
Time	40,CC,CC,CD	6.40 (06:40 am)
Parameter 1	41,78,1F,68	15.50
Parameter 2	46,AB,5A,12	21933.0
Parameter 3	46,AC,57,6A	22059.7
Parameter 4	46,AB,3C,58	21918.2
Parameter 5	46,A9,AD,9D	21718.8
CRC	BE,7C	

The response to time datalog query contains data in following structure.

First two bytes are device address and function code, followed by number of bytes data of 1 byte and then date and a time data of 4 bytes each.

Then requested parameters are received in order that is specified in timelog parameters settings, each of 4 bytes.

The response ends with 2 bytes of CRC.

### 4.3 Load Profile Datalogging

This type of datalogging stores data on each day at time 00:00. The parameters stored in this log include all energies and maximum demands. This log stores data daily as well as monthly interval. Hence, daily and monthly energy consumption can be logged. Furthermore, maximum power demand and maximum current demand during each day and each month is also logged. This data can be used to study load behaviour over a period of time.

The daily data available to the user is maximum of one year interval and the monthly data for 14 years interval assuming the log requested is after the starting date (requesting data before the starting date will result in modbus exception message). 1 year after the starting date, the oldest logs of daily data are constantly replaced with latest logs. 14 years after the starting date, all the load profile logs for that channel are cleared and logging is started again.

This log can be selected or de-selected using memory location 46499, if it is selected, then energy, maximum demand will be logged. The starting date of this datalog is stored in read only memory location 46501.

The user can access different parameters in this log by sending queries using following addresses.

Note: Changing the meter date resets the load profile log.

TABLE 18: Addresses for Load Profile datalog access

Parameter	Modbus Start Address Hex	
	High Byte	Low Byte
Daily Energy Datalog Download Addr	01	CC
Daily Maximum Demand Datalog Download Addr	01	CE
Monthly Energy Overflow count Datalog Download Addr	01	D0
Monthly Energy Datalog Download Addr	01	D2
Monthly Maximum Demand Datalog Download Addr	01	D4

**Note:** Total Monthly energy is combination of overflow count and main energy .

For Example: if overflow count = 2 and main energy is 345678 then total energy for that month will be,  $2 \times 10^9 + 345678 = 2000345678$ .

TABLE 19: Parameter number for Energy datalog Load Profile

Parameter number	Description	Energy Address (4X)
01	Tariff Energy Source 1	46395
02	Tariff Energy Source 2	46397
03	Tariff Energy Source 3	46399
04	Tariff Energy Source 4	46401
05	Tariff Energy Source 5	46403

TABLE 20: Parameter number for max. Power Demand datalog Load Profile

Parameter number	Description
01	Imp watt Max demand
02	Exp watt Max demand
03	Capacitive VAr Max demand
04	Inductive VAr Max demand
05	Apparent Max demand
06	Current Max demand

TABLE 21 : Parameter number for Energy overflow datalog Load Profile

Parameter number	Description
01	Tariff Energy Source 1 Overflow Count
02	Tariff Energy Source 2 Overflow Count
03	Tariff Energy Source 3 Overflow Count
04	Tariff Energy Source 4 Overflow Count
05	Tariff Energy Source 5 Overflow Count

#### Query Format for Downloading the Load Profile Datalog

The query format for downloading an entry of a daily load profile log is given below. Maximum number of register the user can access in 1 query are limited by 40.

Query example:

Description	Decimal Value	Hex Value
Dev Addr	03	03
Func Code	16	10
Start Addr Hi		01
Start Addr Lo		CC
No of Reg Hi	00	00
No of Reg Lo	20	14
Log Download Bytes	40	28
Parameter no	03	03
Date	04	04
Month	11	0B
Year	17	11
CRC Lo		AD
CRC Hi		C3

Example: If a user wants to access daily energy load profile log of Capacitive VAr Energy for 10 days from 4 November 2017 to 13 November 2017, the query for this will be as following.

03,10,01,CC,00,14,28,03,04,0B,11,AD,C3

**03** is device address;

**10** is function code;

**01 CC** is the starting address for accessing the daily energy load profile log. (refer **TABLE 18**)

**00 14** is the number of registers to be accessed. This value will be double of the number of parameters requested.

**28** is the number of bytes requested in this query. This value will be 4 times the number of parameters requested.

**03** is the parameter number for Tariff Source 3 energy (see address 46399 of **TABLE 3**). (Also refer **TABLE 19**)

**04 0B 11** is the starting date of the log to be accessed.

**AD C3** is the CRC added at the end.

**Note: Energy is read in integer format.**

Response:

Description	Hex	Decimal
Dev Addr	03	03
Func Code	10	16
Number of bytes	28	40
Value 1 (Nov 4)	05,59,F1,C6	89780678
Value 2 (Nov 5)	05,59,F2,40	89780800
Value 3 (Nov 6)	05,59,F3,D0	89781200
Value 4 (Nov 7)	05,59,F4,98	89781400
Value 5 (Nov 8)	05,59,F5,60	89781600
Value 6 (Nov 9)	05,59,F6,28	89781800
Value 7 (Nov 10)	05,59,F6,F0	89782000
Value 8 (Nov 11)	05,59,F7,B8	89782200
Value 9 (Nov 12)	05,59,F8,80	89782400
Value 10 (Nov 13)	05,59,F9,48	89782600
CRC	A9,2A	

The response to the load profile query contains device address, function code and number of bytes data each of 1 byte, and then the requested parameters of 4 bytes each. Each parameter represents data over a period of a day when daily log is accessed and represents data over a period of a month when monthly log is accessed. The response ends with 2 byte CRC.

Query example:

Description	Decimal Value	Hex Value
Dev Addr	03	03
Func Code	16	10
Start Addr Hi		01
Start Addr Lo		CE
No of Reg Hi	00	00
No of Reg Lo	20	14
Log Download Bytes	40	28
Parameter no	03	03
Date	04	04
Month	11	0B
Year	17	11
CRC Lo		AD
CRC Hi		C3

Example: If a user wants to access daily energy load profile log of Capacitive VAR max demand for 10 days from 4 November 2017 to 13 November 2017, the query for this will be as following.

03,10,01,CE,00,14,28,03,04,0B,11,AD,C3,00,14,28,03,04,0B,11,AD,C3

**03** is device address;

**10** is function code;

**01 CE** is the starting address for accessing the daily demand load profile log. (refer **TABLE 18**)

**00 14** is the number of registers to be accessed. This value will be double of the number of parameters requested.

**28** is the number of bytes requested in this query. This value will be 4 times the number of parameters requested.

**03** is the parameter number for Capacitive Var max demand data. (refer **TABLE 19**)

**04 0B 11** is the starting date of the log to be accessed.

**AD C3** is the CRC added at the end.

The load profile datalog access query consists of device address and function code followed by the starting address which is different for different parameters and mentioned in **TABLE 18**. Number of registers can vary in multiple of 2, but can not exceed 40 and corresponding to it, number of bytes can not exceed 80.

Parameter number decides the parameter within the log (eg. Capacitive VAR demand from the daily demand log.)

Refer **TABLE 19** and **TABLE 20**.

Date, month and year decides the date from which the data is to be downloaded.

All data in the query is represented in hexadecimal format.

At the end 2 byte CRC is calculated.

**Note: Demand is read in float format.**

Response:

Description	Hex	Decimal
Dev Addr	03	03
Func Code	10	16
Number of bytes	28	40
Value 1 (Nov 4)	43,7A,99,99	250.6
Value 2 (Nov 5)	42,C9,66,66	100.7
Value 3 (Nov 6)	43,16,D4,7B	150.38
Value 4 (Nov 7)	44,16,39,9A	600.9
Value 5 (Nov 8)	42,97,CC,CD	75.9
Value 6 (Nov 9)	43,1C,B3,33	156.7
Value 7 (Nov 10)	43,AF,19,9A	350.2
Value 8 (Nov 11)	44,09,A6,66	550.6
Value 9 (Nov 12)	44,39,26,66	740.1
Value 10 (Nov 13)	44,07,6C,CC	541.7
CRC	A9,2A	

The response to the load profile query contains device address, function code and number of bytes data each of 1 byte, and then the requested parameters of 4 bytes each. Each parameter represents data over a period of a day when daily log is accessed and represents data over a period of a month when monthly log is accessed. The response ends with 2 byte CRC.

Note: Modbus exception occurs in the following cases :

1. If user tries to access the data before the datalog starting date.
2. For daily log, if user tries to access data other than that of the previous 12 months (present month included).
3. For monthly log, if user tries to access data other than the 14 years (datalog start year included) after datalog starting year.

## 5. Connection for Optional Pulse Output / Digital Input / RS 485 / Ethernet Module (rear view of Multifunction Meter):

### Location of Modbus, 2 Relay & 4 Digital Inputs

### Location of Ethernet

### 1. Down Side

### 2. Up Side

## NOTE

The Information contained in these installation instructions is for use only by installers trained to make electrical power installations and is intended to describe the correct method of installation for this product. However, 'manufacturer' has no control over the field conditions which influence product installation.

It is the user's responsibility to determine the suitability of the installation method in the user's field conditions. 'manufacturer' only obligations are responsibility to determine the suitability of the installation method in the user's field conditions. 'manufacturer' only obligations are those in 'manufacturer' standard Conditions of Sale for this product and in no case will 'manufacturer' be liable for any other incidental, indirect or consequential damages arising from the use or misuse of the products.
